6. Disadvantage

Thursday, March 18, 2021 4:29 PM

1. Tricky to use
2. Risky

7. Batch Vs Online Learning

Thursday, March 18, 2021 4:29 PM

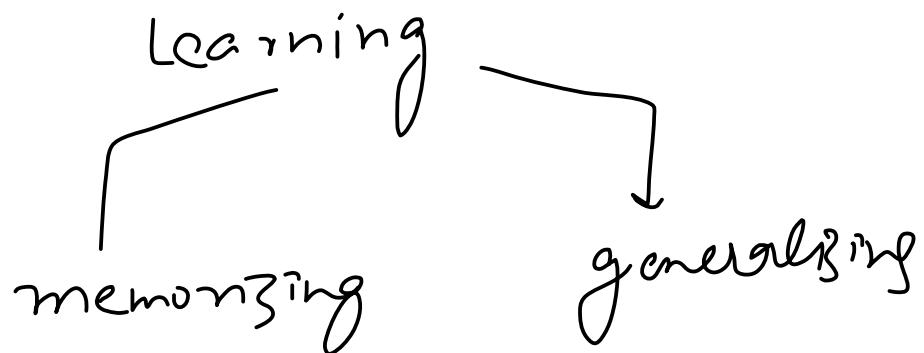

Offline Learning	Features	Online Learning
Less complex as model is constant	Complexity	Dynamic complexity as the model keeps evolving over time
Fewer computations, single time batch-based training	Computational Power	Continuous data ingestions result in consequent model refinement computations
Easier to implement	Use in Production	Difficult to implement and manage
Image Classification or anything related to Machine Learning - where data patterns remains constant without sudden concept drifts	Applications	Used in finance, economics, health where new data patterns are constantly emerging
Industry proven tools. E.g. Sci-kit, TensorFlow, Pytorch, Keras, Spark Mlib	Tools	Active research/New project tools: E.g. MOA, SAMOA, scikit-multiflow, streamDM

1. Instance Vs Model Based Learning

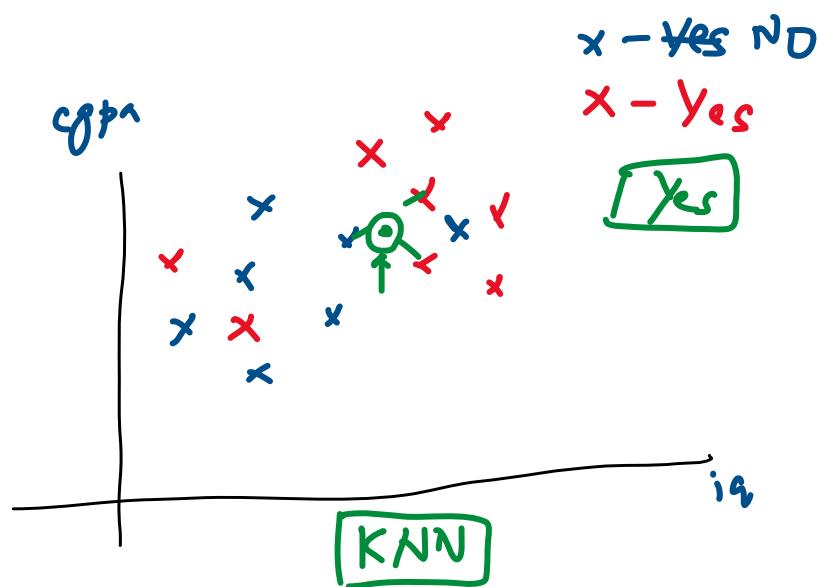

Friday, March 19, 2021 4:05 PM

2. Instance Based

Friday, March 19, 2021 4:06 PM

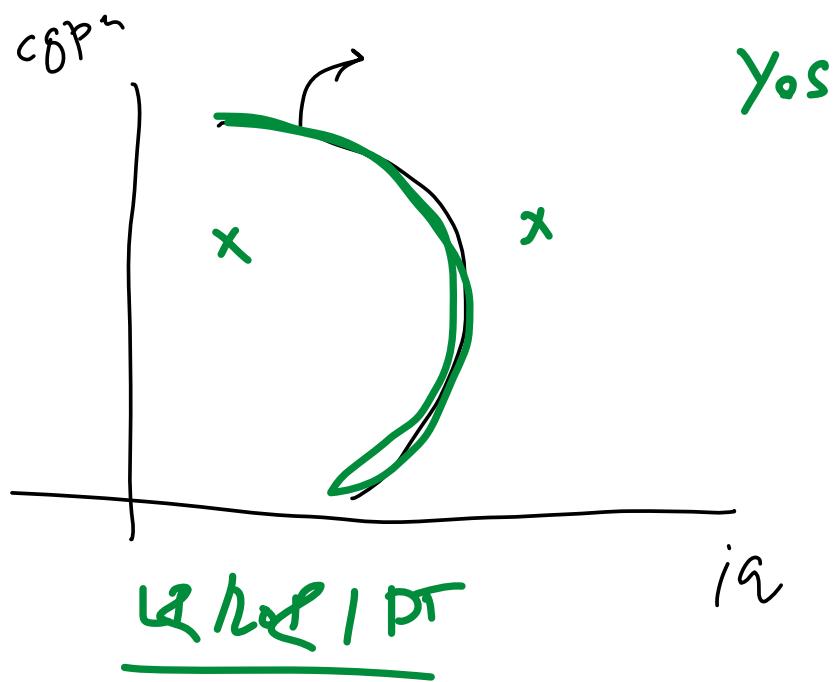

iq	cgp	Placement
80	8	y
70	7	n
7.5	103	

3. Model Based

Friday, March 19, 2021 4:06 PM

iq | cgpa | place

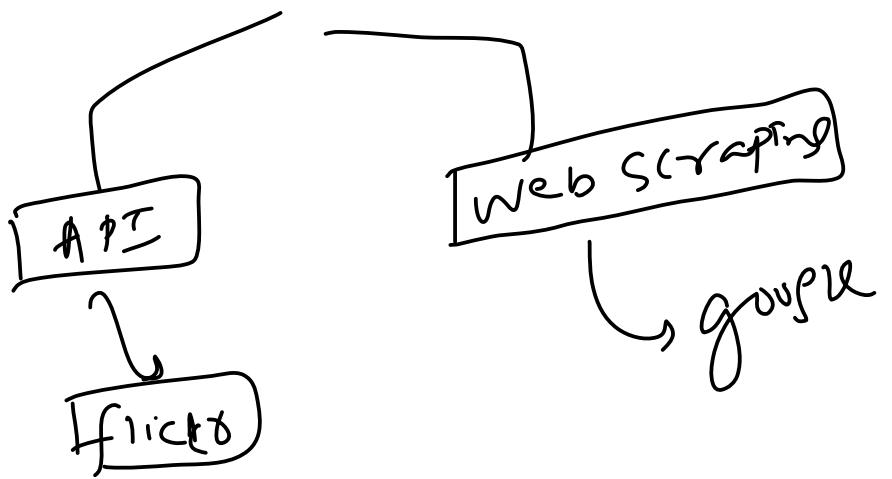

4. Differences

Friday, March 19, 2021 4:06 PM

Usual/Conventional Machine Learning	Instance Based Learning
Prepare the data for model training	Prepare the data for model training. No difference here
Train model from training data to estimate model parameters i.e. discover patterns	Do not train model. Pattern discovery postponed until scoring query received
Store the model in suitable form	There is no model to store
Generalize the rules in form of model, even before scoring instance is seen	No generalization before scoring. Only generalize for each scoring instance individually as and when seen
Predict for unseen scoring instance using model	Predict for unseen scoring instance using training data directly
Can throw away input/training data after model training	Input/training data must be kept since each query uses part or full set of training observations
Requires a known model form	May not have explicit model form
Storing models generally requires less storage	Storing training data generally requires more storage

1. Various Data Based Job Roles

Wednesday, March 24, 2021 1:25 PM

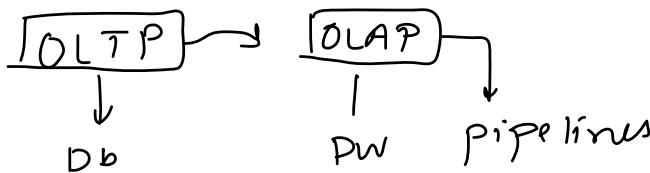

1. Data Engineer

Wednesday, March 24, 2021 1:25 PM

Skills Required

Job Roles

- Scrape Data from the given sources.
- Move/Store the data in optimal servers/warehouses.
- Build data pipelines/APIs for easy access to the data.
- Handle databases/data warehouses.

- Strong grasp of algorithms and data structures
- Programming Languages (Java/R/Python/Scala) and script writing
- Advanced DBMS's
- BIG DATA Tools (Apache Spark, Hadoop, Apache Kafka, Apache Hive)
- Cloud Platforms (Amazon Web Services, Google Cloud Platform)
- Distributed Systems
- Data Pipelines

2. Data Analyst

Wednesday, March 24, 2021 1:26 PM

Skills

- *Statistical Programming*
- *Programming Languages (R/SAS/Python)*
- *Creative and Analytical Thinking*
- *Business Acumen — Medium to High preferred*
- *Strong Communication Skills.*
- *Data Mining, Cleaning, and Munging*
- *Data Visualization*
- *Data Story Telling*
- *SQL*
- *Advanced Microsoft Excel*

Responsibilities of a Data Analyst

- *Cleaning and organizing Raw data.*
- *Analyzing data to derive insights.*
- *Creating data visualizations.*
- *Producing and maintaining reports.*
- *Collaborating with teams/colleagues based on the insight gained.*
- *Optimizing data collection procedures*

3. Data Scientist

Wednesday, March 24, 2021 1:26 PM

“A data scientist is someone who is better at statistics than any software engineer and better at software engineering than any statistician”.

4. ML Engineer

Wednesday, March 24, 2021 1:26 PM

Responsibilities

- Deploying machine learning models to production ready environment
- Scaling and optimizing the model for production
- Monitoring and maintenance of deployed models

Skills

- Mathematics
- Programming Languages (R/Python/Java/Scala mainly)
- Distributed Systems
- Data model and evaluation
- Machine Learning models
- Software Engineering & Systems design

4. Feature Extraction ✓

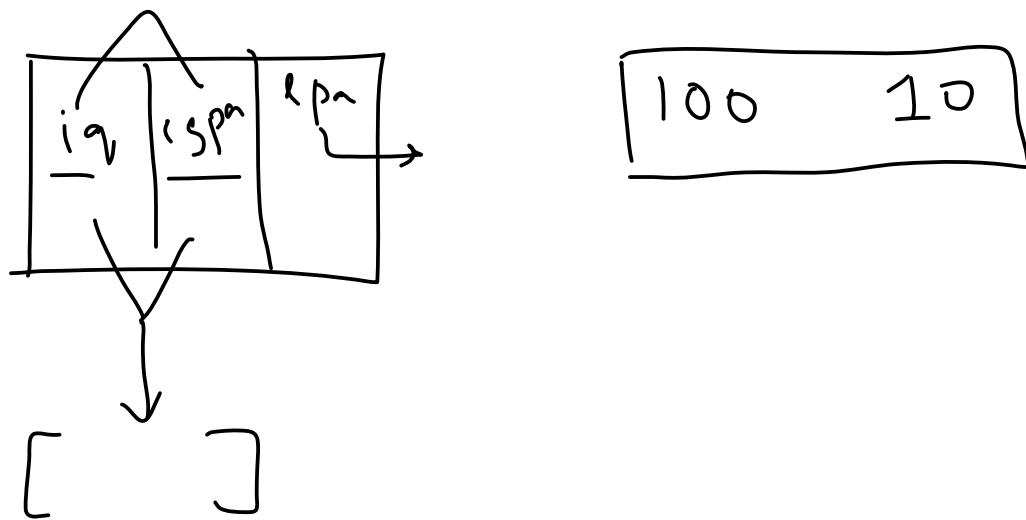

Thursday, April 8, 2021 7:13 PM

What is Feature Scaling?

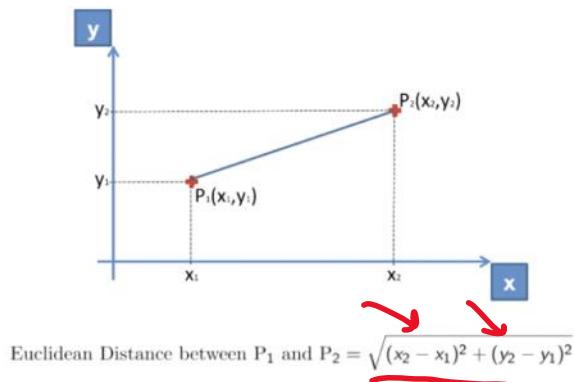

Friday, April 9, 2021 4:21 PM

Feature Scaling is a technique to standardize the independent features present in the data in a fixed range

Why do we need Feature Scaling?

Friday, April 9, 2021 4:27 PM

Let x be the no. of Salary and y be the no. of Age

Example: $x_1 \& y_1$ are in row 2, $x_2 \& y_2$ are in row 9

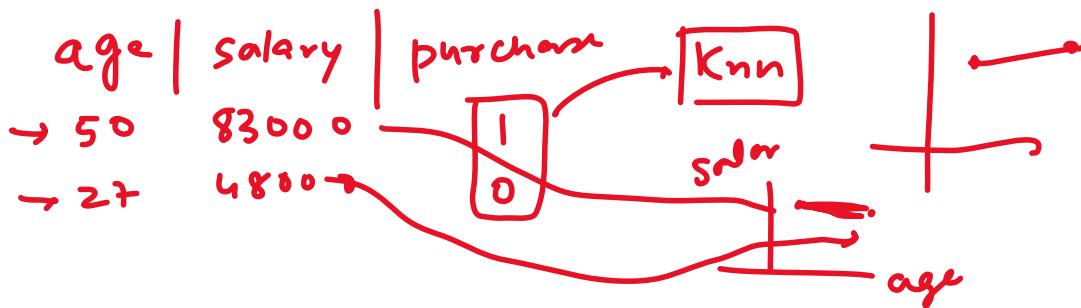

$$(x_2 - x_1)^2 = (83000 - 48000)^2$$

$$= 1225000000$$

$$(y_2 - y_1)^2 = (50 - 27)^2$$

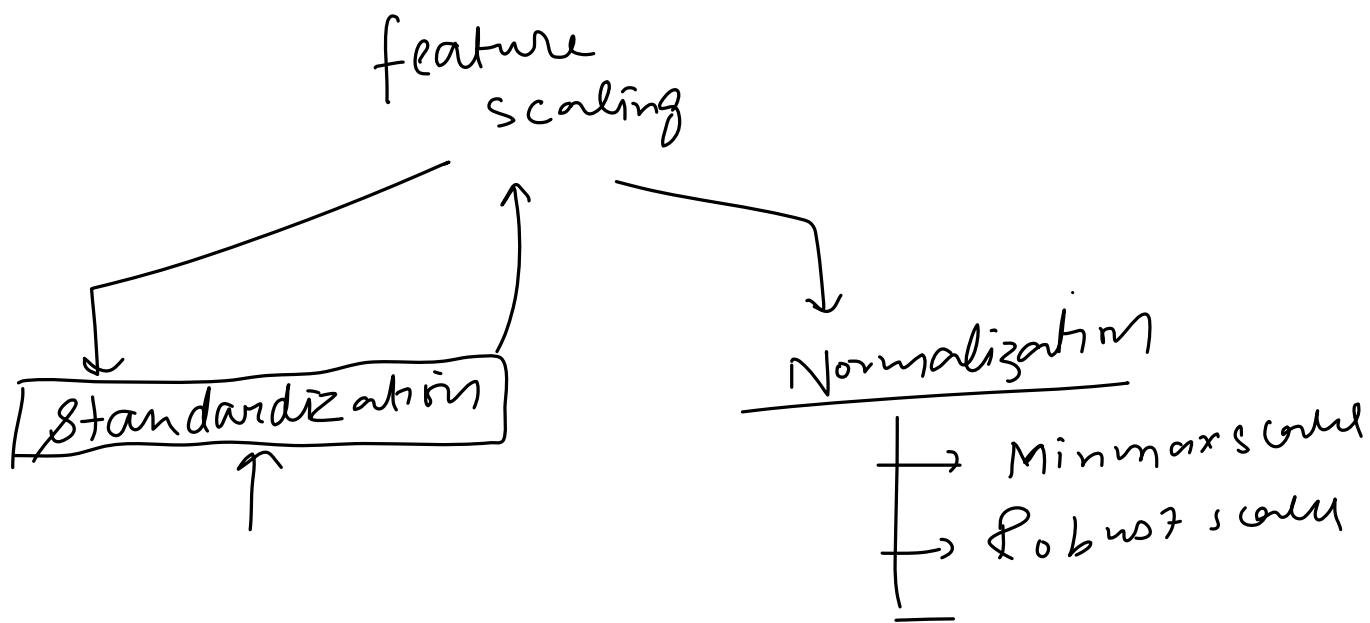

$$= 529$$

Knn

Types of Feature Scaling

Friday, April 9, 2021 4:27 PM

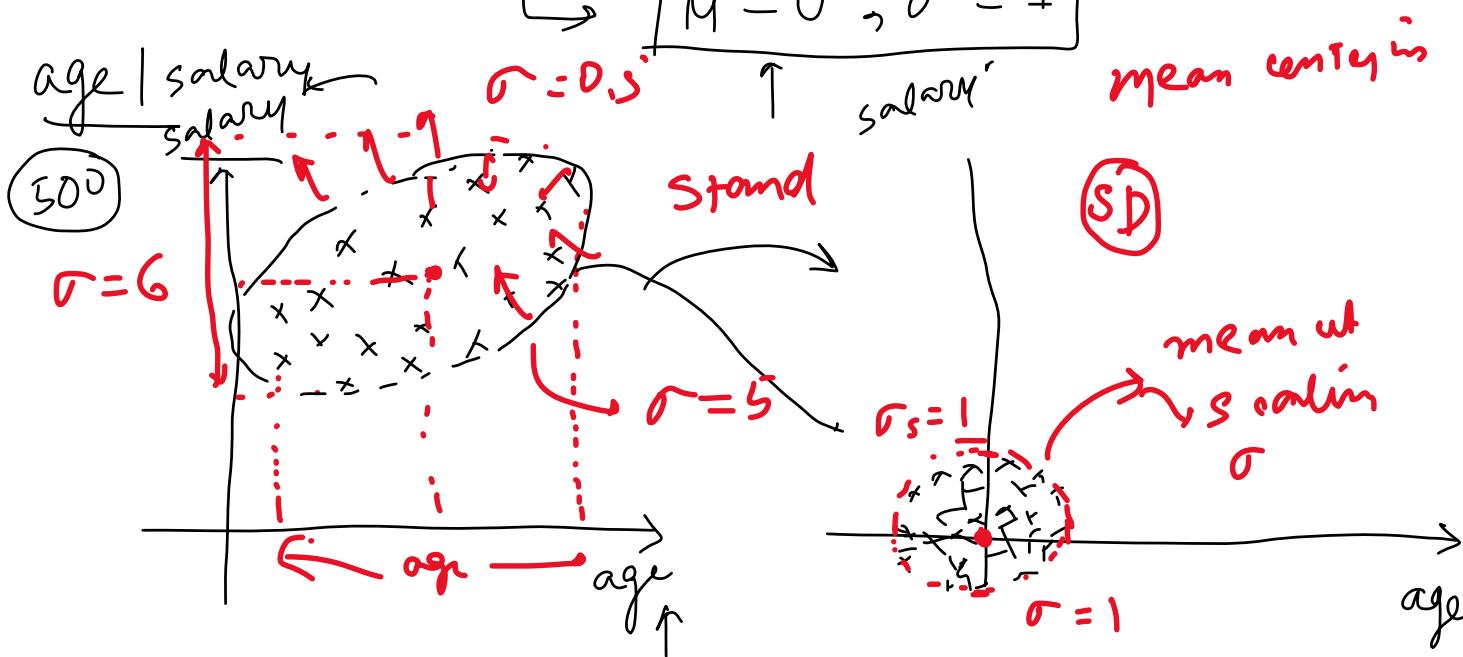

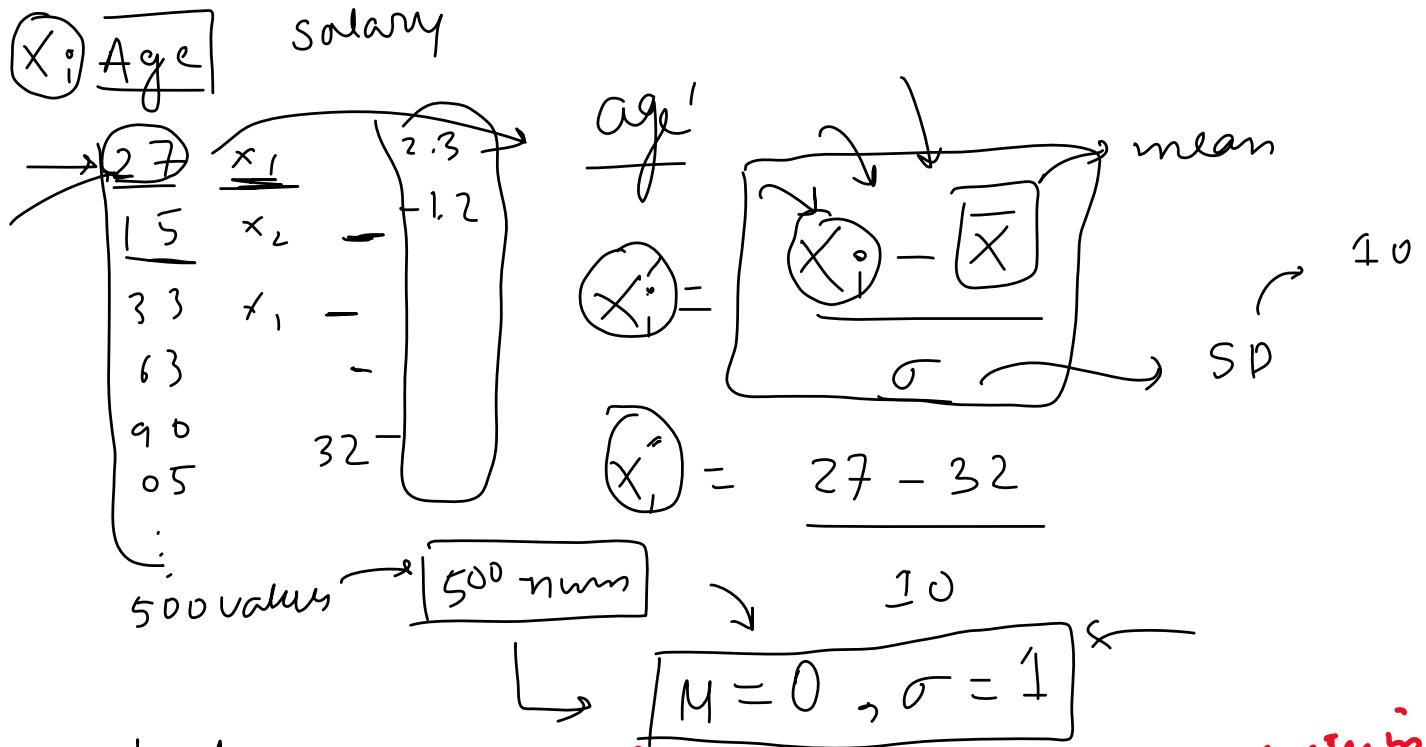

Standardization - Intuition

Friday, April 9, 2021 4:27 PM

$$\frac{15 - 32}{10}$$

Also called as Z-score Normalization

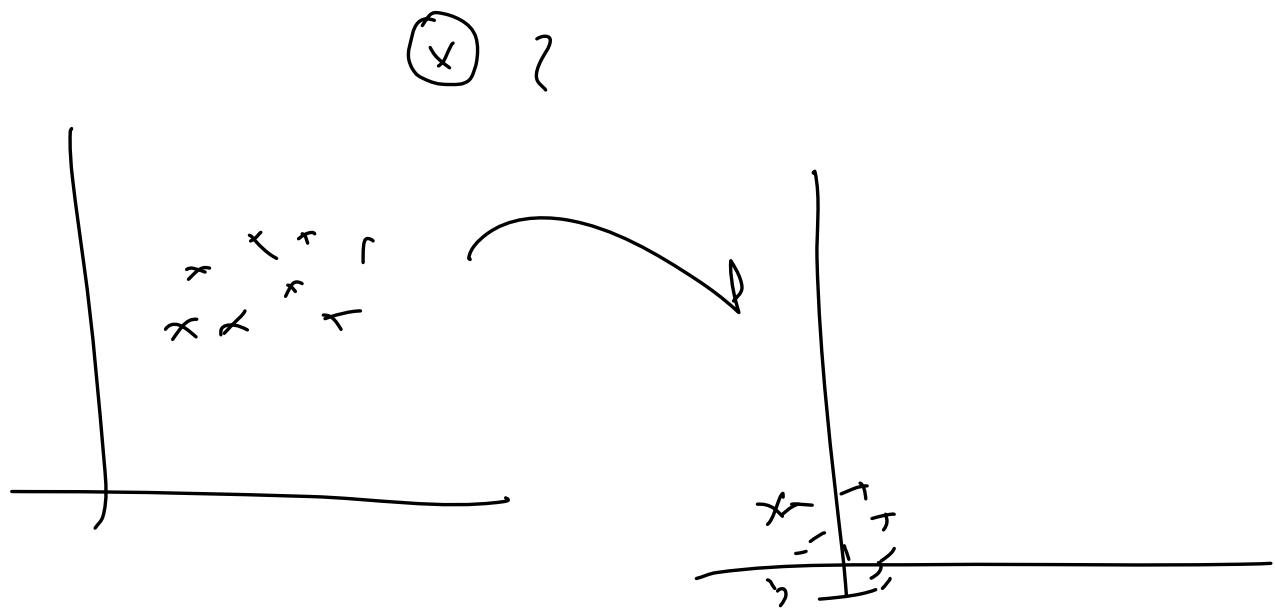

Example

Friday, April 9, 2021 4:28 PM

Impact of Outliers

Friday, April 9, 2021 4:28 PM

When to use Standardization?

Friday, April 9, 2021 4:28 PM

$$a > b \quad 15 \cancel{>} 100$$

Algorithm(s)	Reason of applying feature scaling
1. K-Means	Use the Euclidean distance measure.
2. K-Nearest-Neighbours	Measure the distances between pairs of samples and these distances are influenced by the measurement units
3. Principal Component Analysis (PCA)	Try to get the feature with maximum variance
4. Artificial Neural Network	Apply Gradient Descent
5. Gradient Descent	Theta calculation becomes faster after feature scaling and the learning rate in the update equation of Stochastic Gradient Descent is the same for every parameter

Decision tree / Random Forest

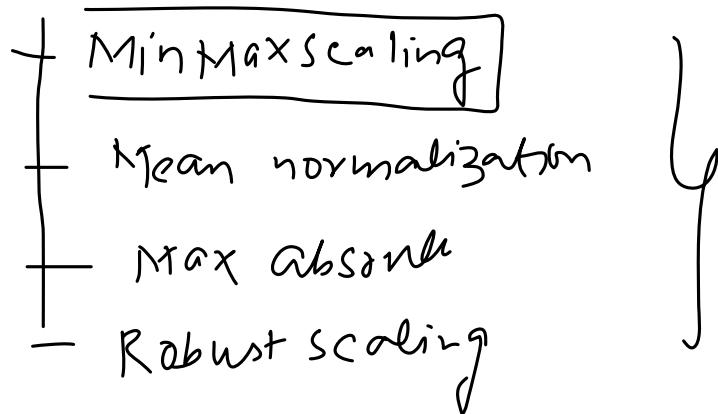

GB, XG BOOST

$$\#^{\frac{1}{2}}$$

Normalization

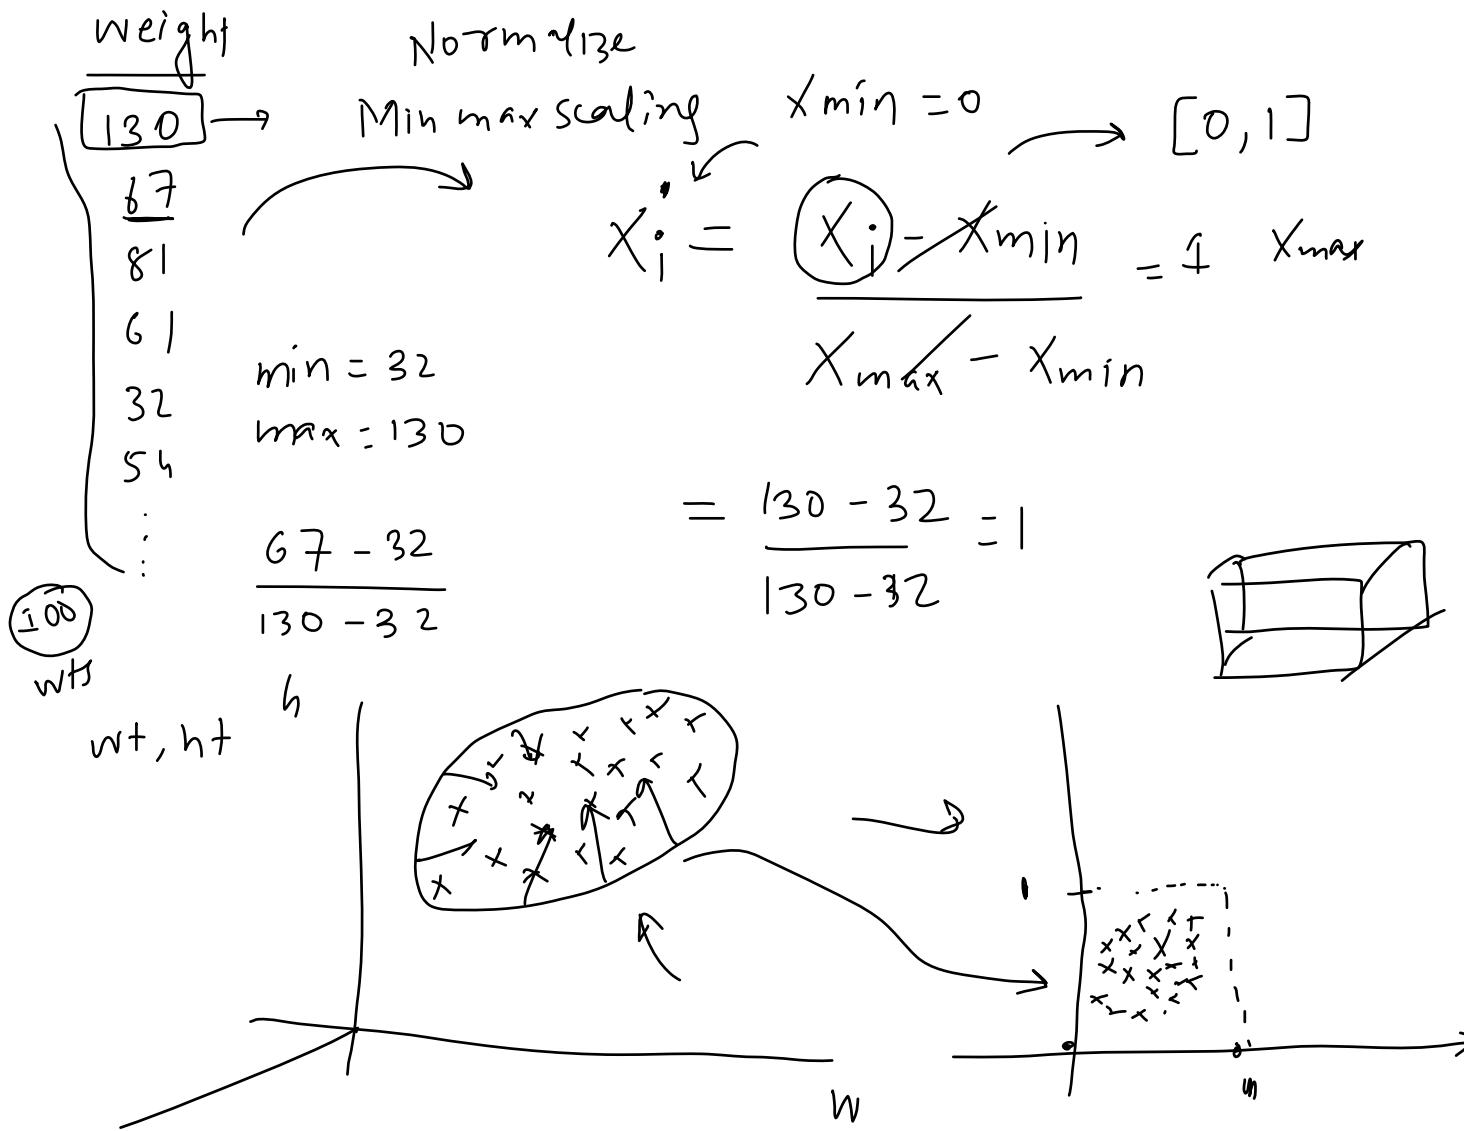

Saturday, April 10, 2021 1:15 PM

Normalization is a technique often applied as part of data preparation for machine learning. The goal of normalization is to change the values of numeric columns in the dataset to use a common scale, without distorting differences in the ranges of values or losing information

MinMaxScaling - Intuition

Saturday, April 10, 2021 1:16 PM

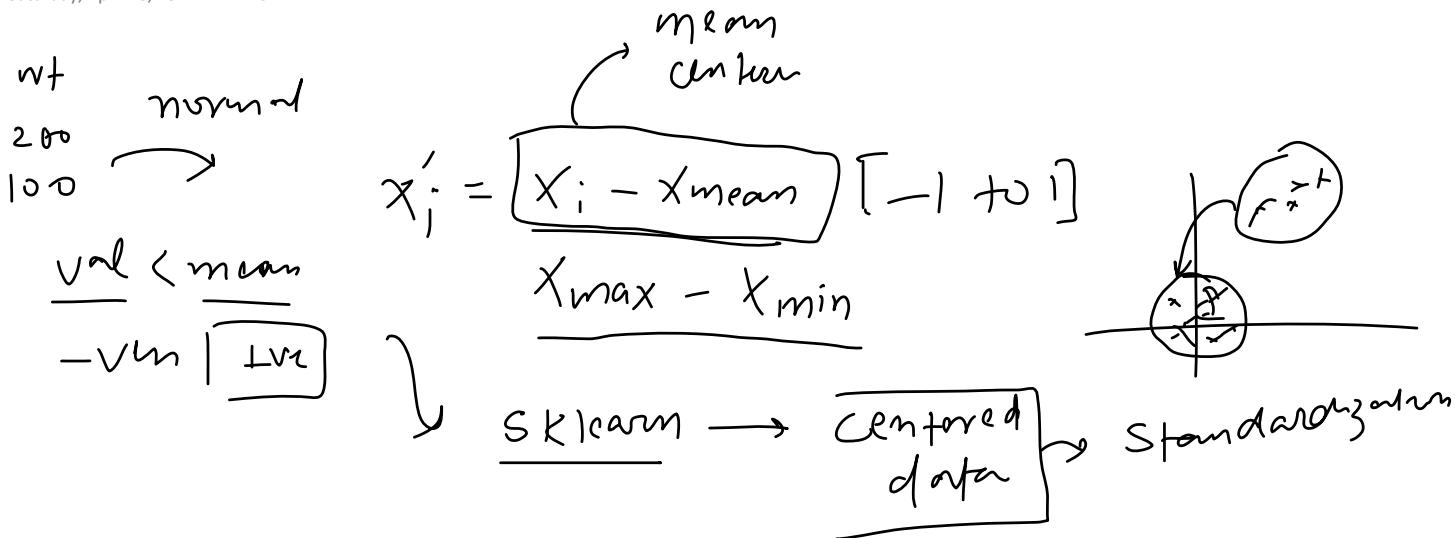

Code Example

Saturday, April 10, 2021 1:17 PM

wine_data →

Mean Normalization

Saturday, April 10, 2021 1:16 PM

MaxAbsScaling

Saturday, April 10, 2021 1:17 PM

The diagram illustrates the MaxAbsScaling formula and its application to sparse data. At the top left, there is a vertical list of values: Wt , 200 , 100 , and 300 . An arrow points from this list to a central box containing the formula:

$$x'_i = \frac{x_i}{|x_{\max}|}$$

Below the box, a large plus sign (+) is followed by the text "sparse data". A curved arrow points from the text "sparse data" to the plus sign. To the right of the plus sign, the text "MaxAbs scaled" is written above a horizontal line, with a curved arrow pointing from the text to the line. A small circle containing the letter "D5" is positioned near the end of the line.

Robust Scaling

Saturday, April 10, 2021 1:17 PM

wt

200

300

100

Robust scale

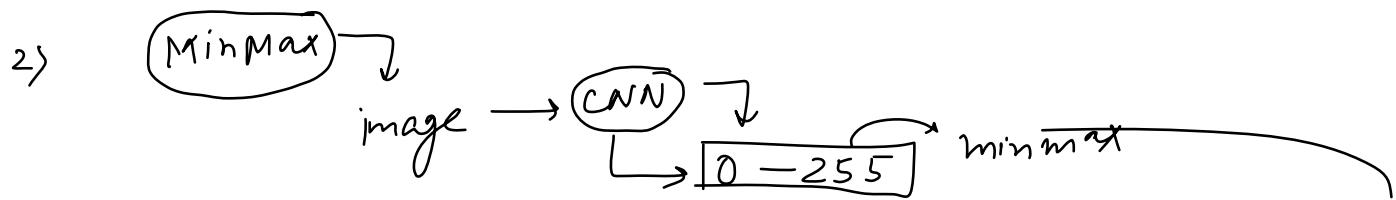

$$x_i' = \frac{x_i - \text{median}}{\text{IQR} \{ 75^{\text{mpg}} - 25^{\text{mpg}} \}}$$

→ Robust to Outliers

Normalization Vs Standardization

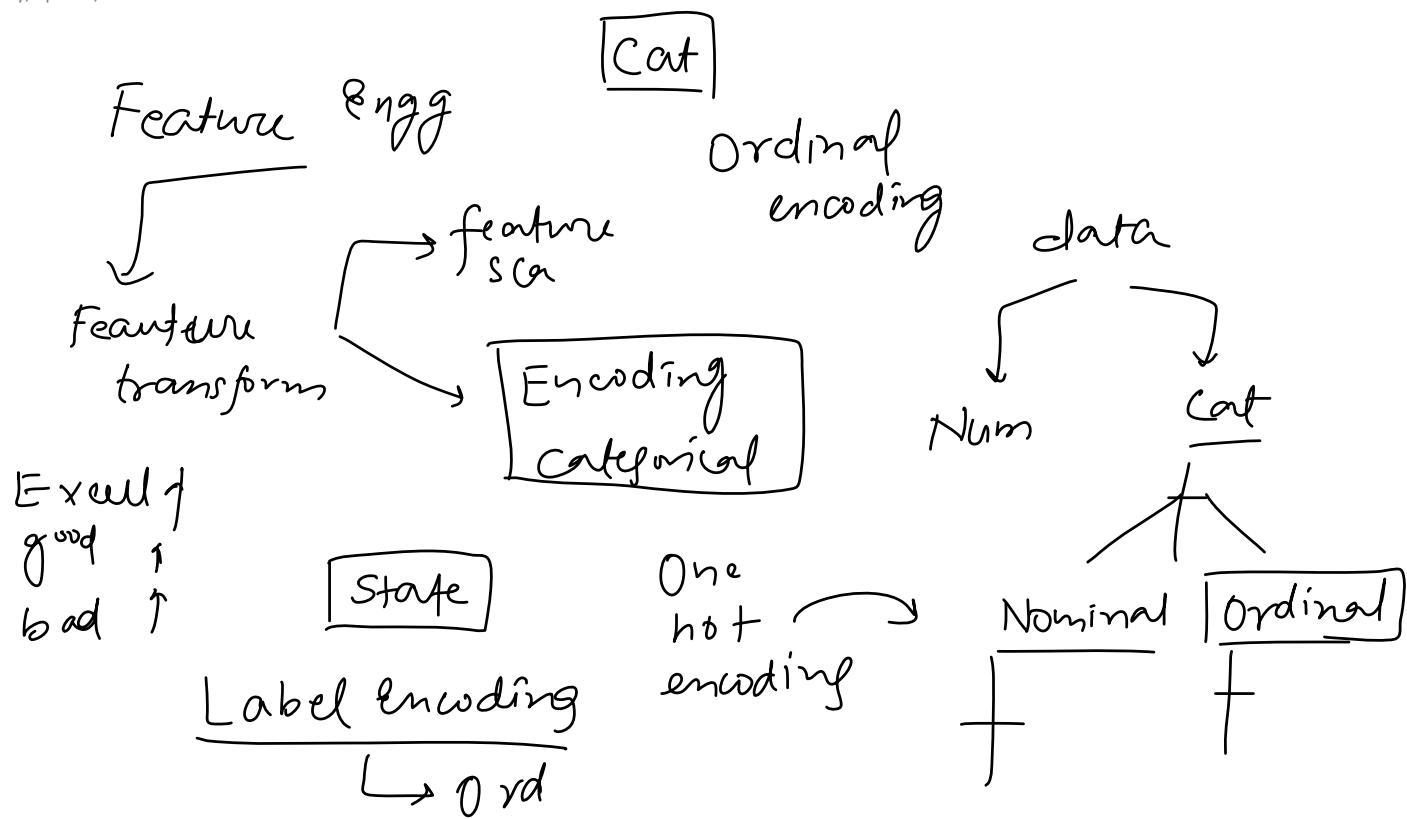

Saturday, April 10, 2021 1:17 PM

1) Is feature scaling required?

The exponent here is a variable called lambda (λ) that varies over the range of -5 to 5, and in the process of searching, we examine all values of λ . Finally, we choose the optimal value (resulting in the best approximation to a normal distribution) for your variable.

Yeo - Johnson Transform

Saturday, April 17, 2021 4:56 PM

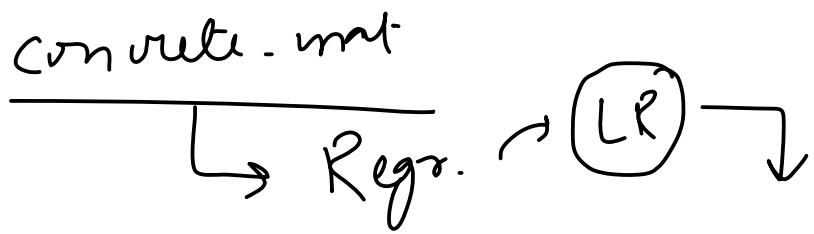

$$x_i^{(\lambda)} = \begin{cases} [(x_i + 1)^\lambda - 1]/\lambda & \text{if } \lambda \neq 0, x_i \geq 0, \\ \ln(x_i) + 1 & \text{if } \lambda = 0, x_i \geq 0 \\ -[(-x_i + 1)^{2-\lambda} - 1]/(2 - \lambda) & \text{if } \lambda \neq 2, x_i < 0, \\ -\ln(-x_i + 1) & \text{if } \lambda = 2, x_i < 0 \end{cases}$$

This transformation is somewhat of an adjustment to the Box-Cox transformation, by which we can apply it to negative numbers.

Power Transformer

Example

1. Encoding Numerical Features

Monday, April 19, 2021 4:18 PM

2. Discretization

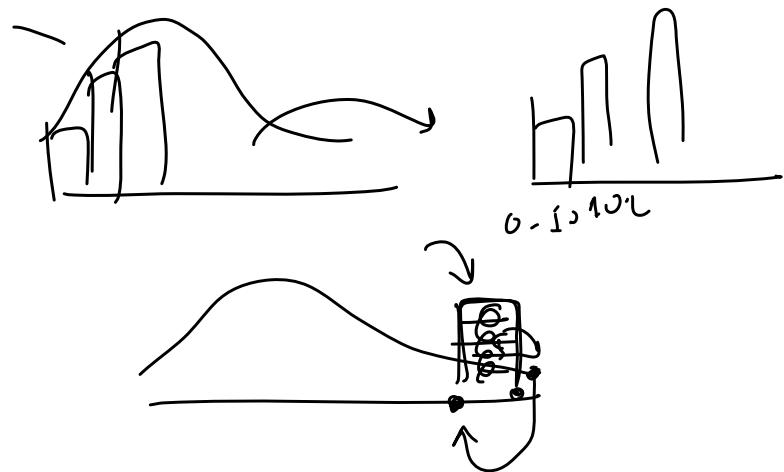

Discretization is the process of transforming continuous variables into discrete variables by creating a set of contiguous intervals that span the range of the variable's values. Discretization is also called binning, where bin is an alternative name for interval.

Why use Discretization:

1. To handle Outliers
2. To improve the value spread

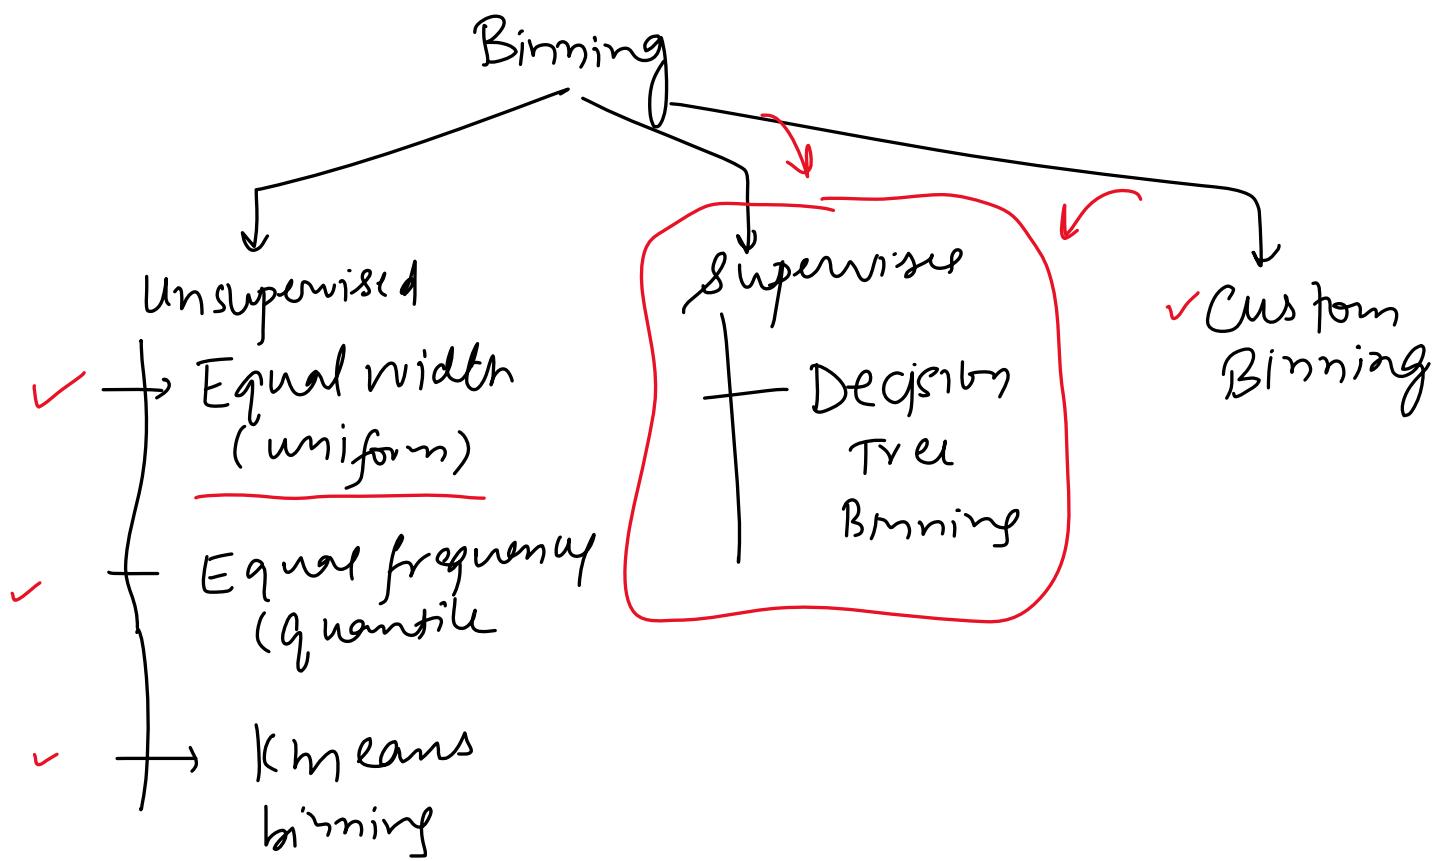

Age

23 42, 57 81. . . 100
↓
0-10, 10-20, 20-30 . . .
5 6 10

3. Types of Discretization

Monday, April 19, 2021 3:56 PM

4. Equal Width/Uniform Binning

Monday, April 19, 2021 3:56 PM

Age
 23, 32, 84, 56, ...
 Bins = 10

- 1) Outliers ↗
- 2) No change in spread

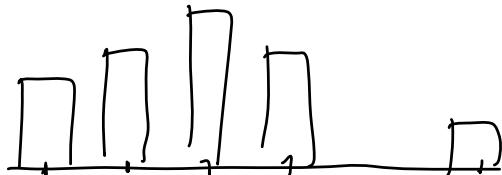

max 100

min 0

$$\frac{\text{max} - \text{min}}{\text{bins}} = \frac{100 - 0}{10} = 10$$

$$\frac{10}{5}, \frac{10}{16}, \frac{10}{17}, \dots, \frac{10}{5}$$

\rightarrow 10 bins

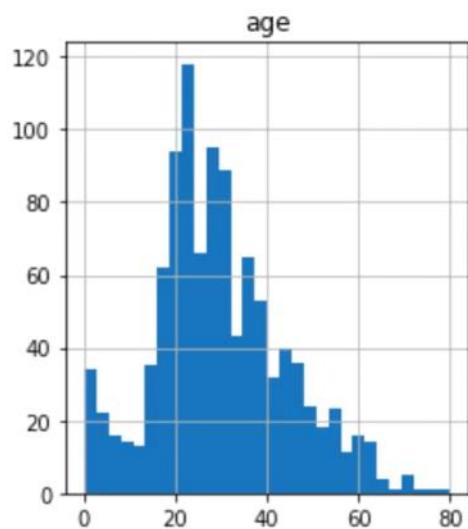

equal binning

	age	age_trf	age_labels

Handling Missing Data

Thursday, April 22, 2021 1:03 PM

Complete Case Analysis

Thursday, April 22, 2021 12:55 PM

Complete-case analysis (CCA), also called "list-wise deletion" of cases, consists in discarding observations where values in any of the variables are missing.

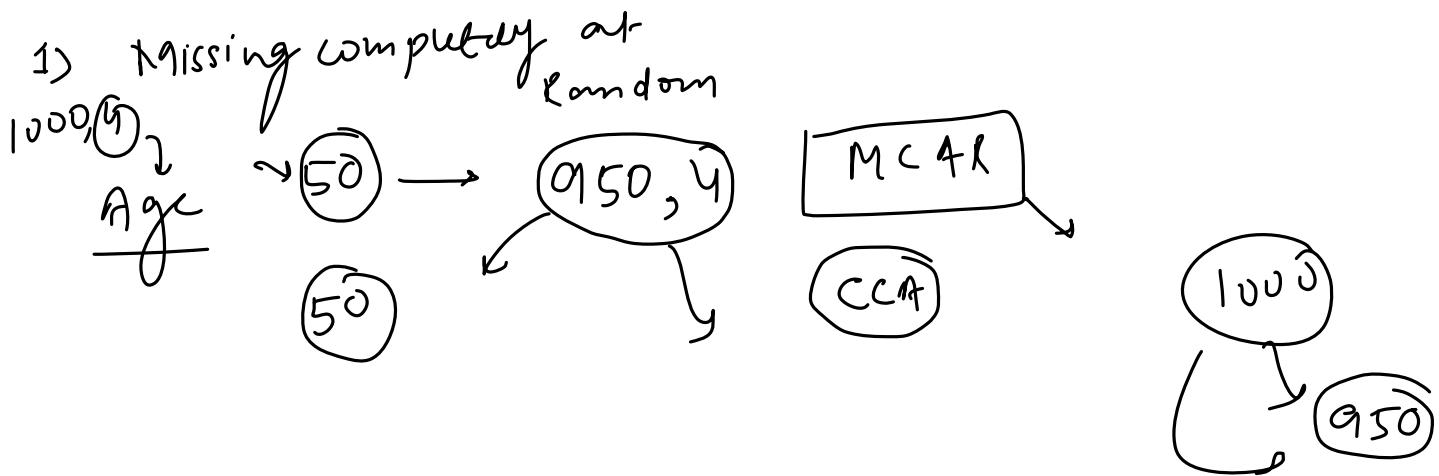

Y6W

CW1

Complete Case Analysis means literally analyzing only those observations for which there is information in **all** of the variables in the dataset.

Assumption For CCA

Thursday, April 22, 2021 12:58 PM

Advantage/Disadvantage

Thursday, April 22, 2021 12:59 PM

Advantage

1. Easy to implement as no data manipulation required
2. Preserves variable distribution (if data is MCAR, then the distribution of the variables of the reduced dataset should match the distribution in the original dataset)

Disadvantage

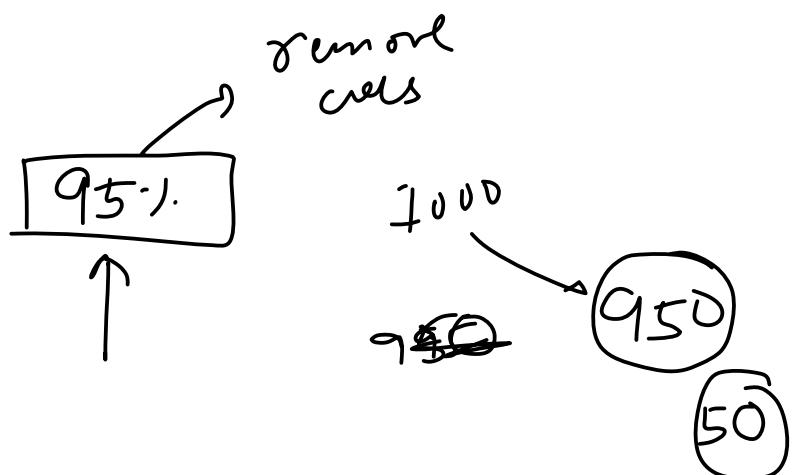

1. It can exclude a large fraction of the original dataset (if missing data is abundant)
2. Excluded observations could be informative for the analysis (if data is not missing at random)
3. When using our models in production, the model will not know how to handle missing data

When to use CCA?

Thursday, April 22, 2021 1:02 PM

1) MCAR ✓

2) $\boxed{5\%} <$

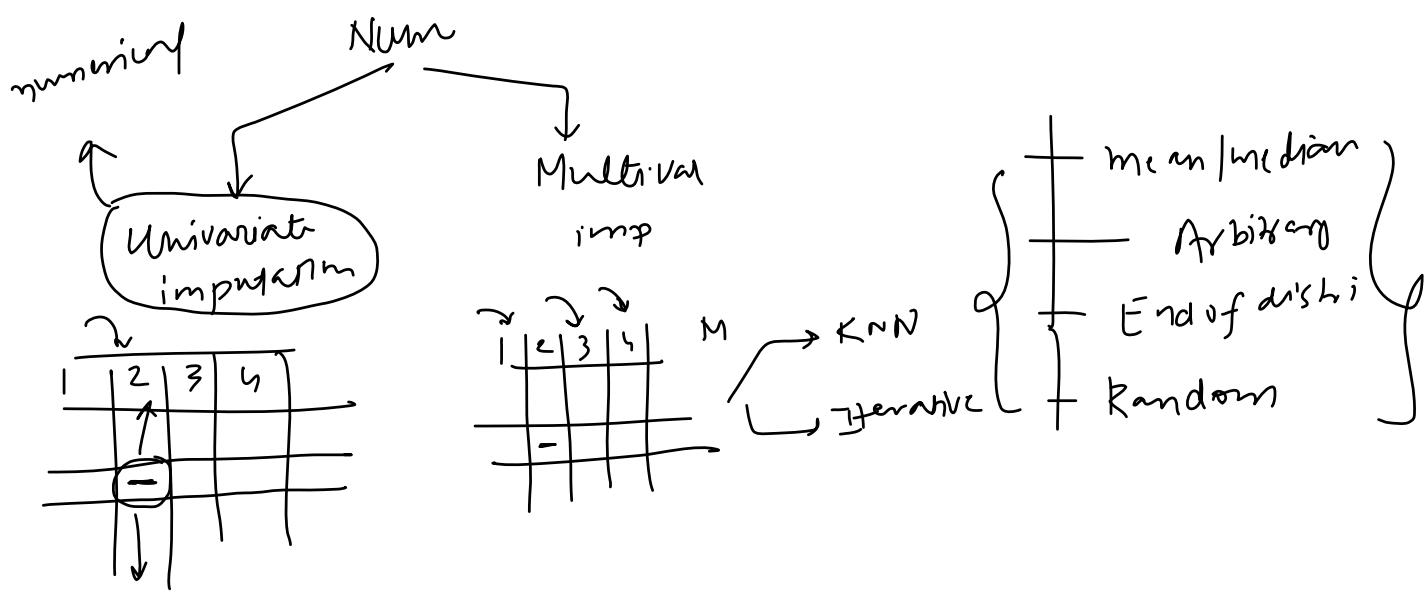

Example

Thursday, April 22, 2021 1:03 PM

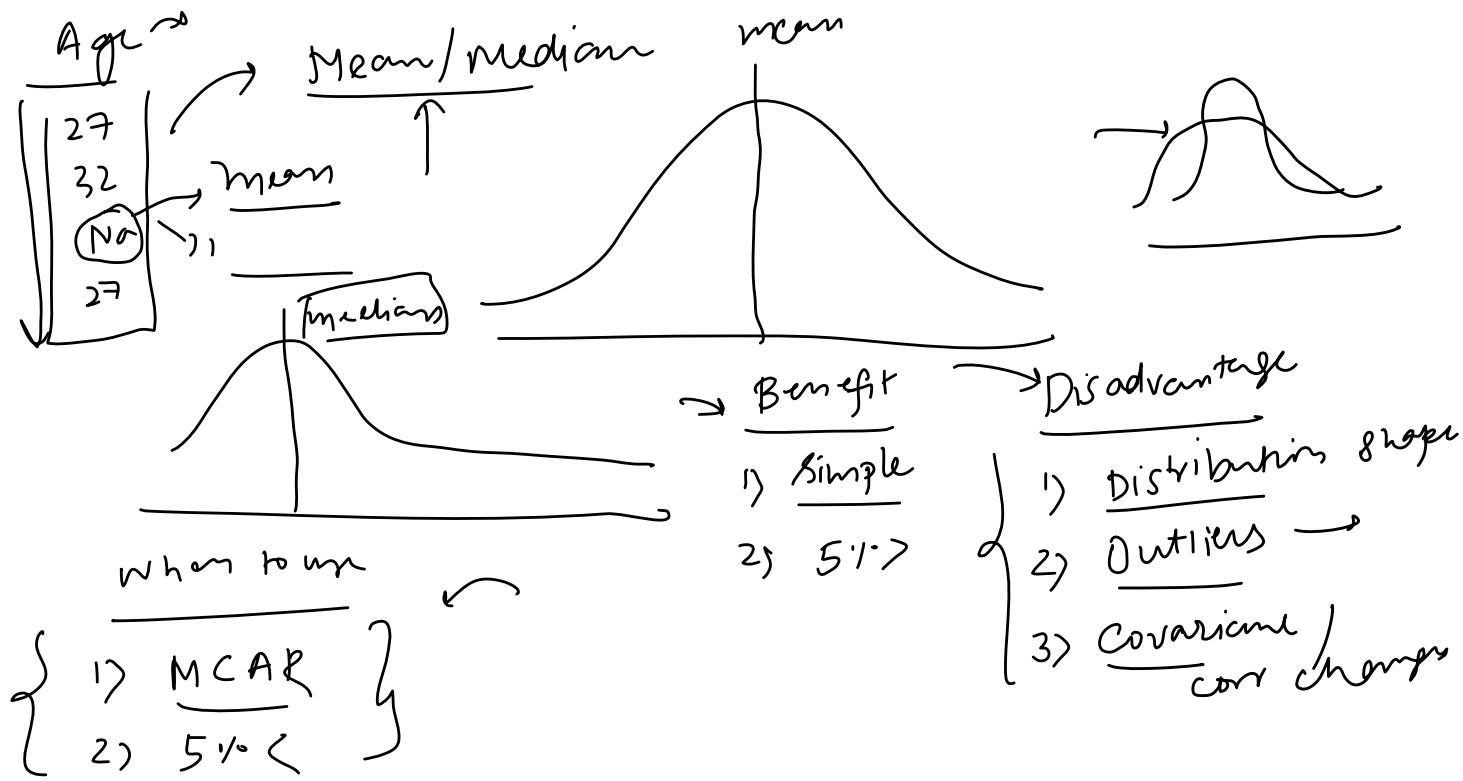

1. Handling Missing Numerical Data

Missing Category Imputation

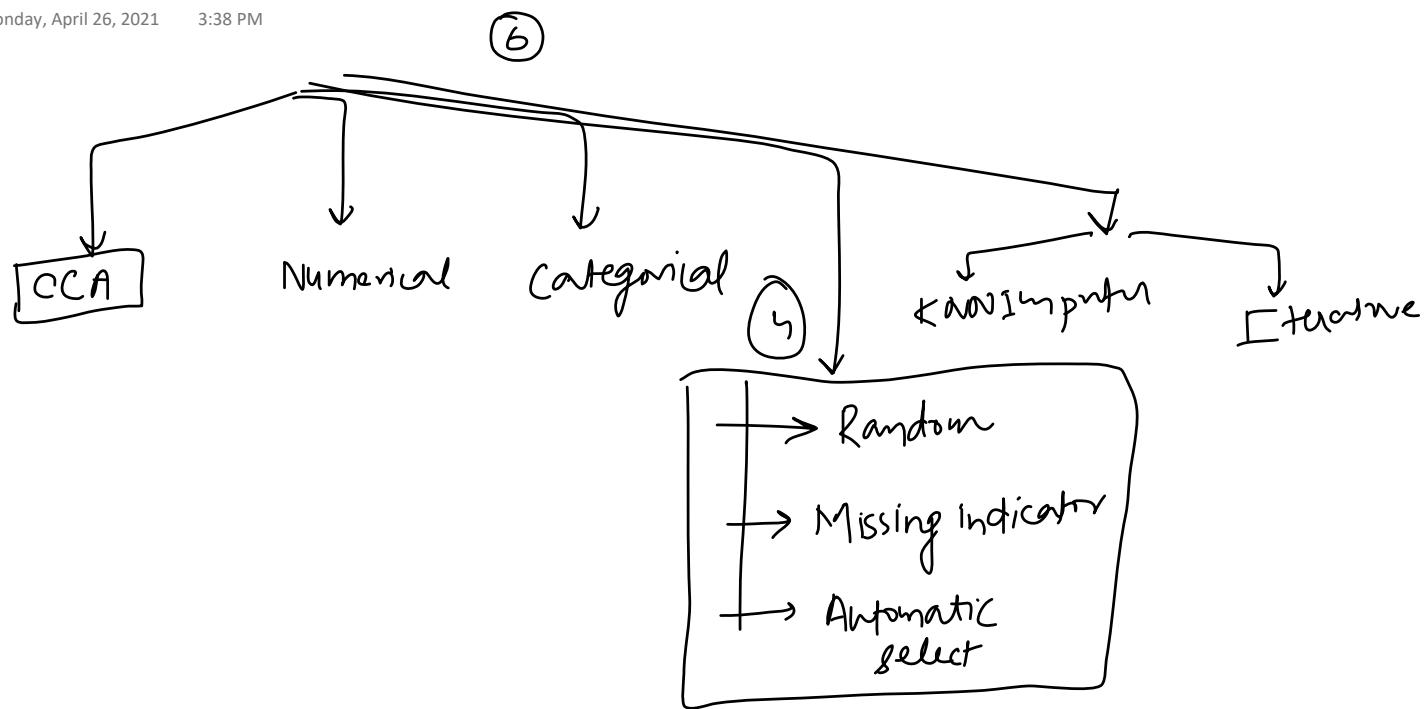

Saturday, April 24, 2021 5:17 PM

Topics to be covered

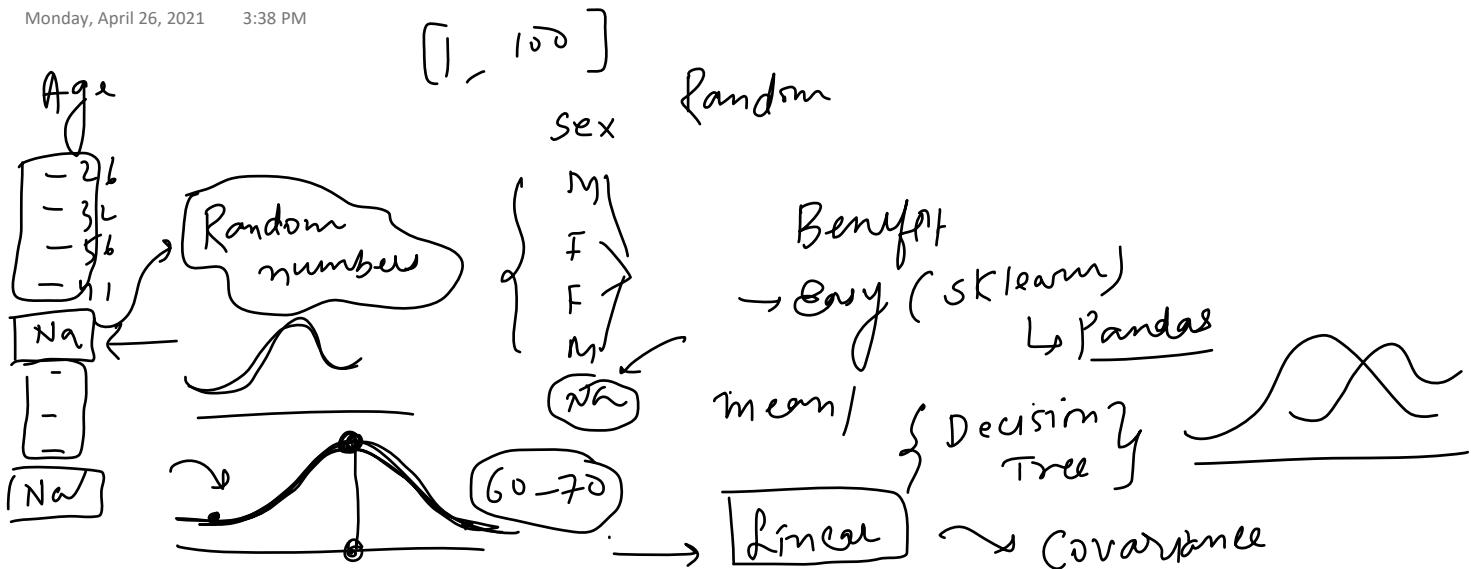

Monday, April 26, 2021 3:38 PM

(6)

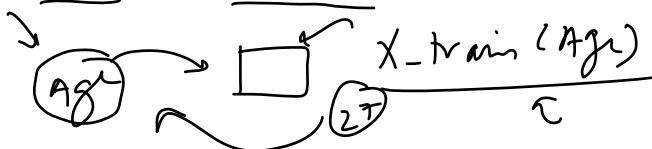

Random Imputation

Monday, April 26, 2021 3:38 PM

1. Preserves the variance of the variable (But Why?)
2. Memory heavy for deployment, as we need to store the original training set to extract values from and replace the NA in coming observations
3. Well suited for linear models as it does not distort the distribution, regardless of the % of NA

Missing Indicator

Monday, April 26, 2021 3:41 PM

Automatically select value for Imputation

Monday, April 26, 2021 3:41 PM

grid search cv

KNN Imputer

Iterative Imputer/MICE

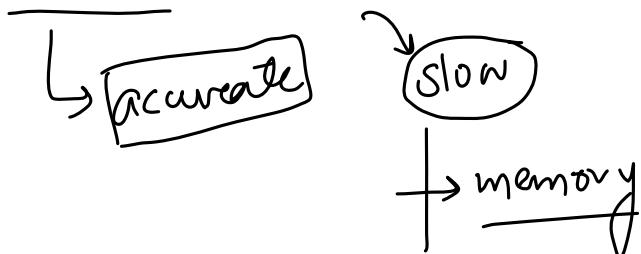

Wednesday, April 28, 2021 11:40 AM

MICE stands for Multivariate Imputation by Chained Equations

Assumptions

Advantages & Disadvantage

How it works?

Wednesday, April 28, 2021 11:41 AM

1. Actual Dataset

	R&D Spend	Administration	Marketing Spend	Profit
21	8.0	15.0	30.0	11.0
37	4.0	5.0	20.0	9.0
2	15.0	10.0	41.0	19.0
14	12.0	16.0	26.0	13.0
44	2.0	15.0	3.0	7.0

2. Removing the target column

	R&D Spend	Administration	Marketing Spend
21	8.0	15.0	30.0
37	4.0	5.0	20.0
2	15.0	10.0	41.0
14	12.0	16.0	26.0
44	2.0	15.0	3.0

3. Introduced some fake nan values

	R&D Spend	Administration	Marketing Spend
21	8.0	15.0	30.0
37	NaN	5.0	20.0
2	15.0	10.0	41.0
14	12.0	NaN	26.0
44	2.0	15.0	NaN

Step 1 - Fill all the NaN values with mean of respective cols

	R&D Spend	Administration	Marketing Spend
21	8.00	15.00	30.00
37	9.25	5.00	20.00
2	15.00	10.00	41.00
14	12.00	11.25	26.00
44	2.00	15.00	29.25

Step 2 - Remove all col1 missing values

Step 3 - Predict the missing values of col1 using other cols

	R&D Spend	Administration	Marketing Spend		Administration	Marketing Spend		R&D Spend	Administration	Marketing Spend	
21	8.00	15.00	30.00		21	15.00	30.00	21	8.00	15.00	30.00
37	Nan	5.00	20.00		37	23.14	5.00	37	23.14	5.00	20.00
2	15.00	10.00	41.00		2	10.00	41.00	2 <td>15.00</td> <td>10.00</td> <td>41.00</td>	15.00	10.00	41.00
14	12.00	11.25	26.00		14	11.25	26.00	14	12.00	11.25	26.00
44	2.00	15.00	29.25		44	15.00	29.25	44	2.00	15.00	29.25

Step 4 - Remove all col2 missing values

Step 5 - Predict the missing values of col2 using other cols

	R&D Spend	Administration	Marketing Spend		R&D Spend	Marketing Spend		R&D Spend	Administration	Marketing Spend	
21	8.00	15.00	30.00		21	8.00	30.00	21	8.00	15.00	30.00

Few Discussions

Thursday, May 20, 2021 4:47 PM

1. Effect of Learning rate
2. The universality of Gradient Descent

$$\hat{b} = 0$$

$$b = b_{\text{old}} - \eta \text{ Slope}$$

$$\frac{d L}{d b} = \left[\sum (y_i - \hat{y}_i)^2 \right] \quad \text{LR} \rightarrow \text{Deep} \rightarrow$$

$L \circ R \rightarrow \underline{\text{functions}}$

Adding m into the mix

Thursday, May 20, 2021 1:48 PM

8 steps

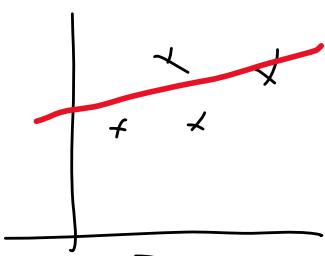

1) init random vals for m and b
 $m = 1$ and $b = 0$

2) epochs = 100, $\eta = 0.01$

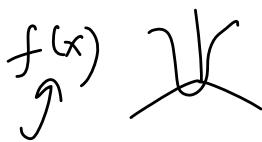

for i in epochs:

$$b = b - \eta \boxed{\text{slope}}$$

$$m = m - \eta \boxed{\text{slope}}$$

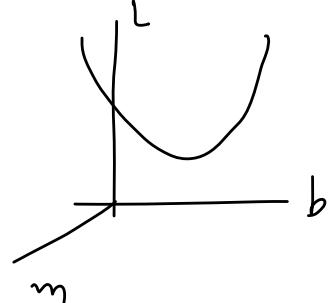

$$z = f(x, y)$$

$$b = 0$$

$$\begin{aligned} L(m, b) &= \sum (y_i - \hat{y}_i)^2 \\ b\text{-slope} &= \boxed{\frac{\partial L}{\partial b}} \end{aligned}$$

$$\begin{aligned} m\text{-slope} &= \frac{\partial L}{\partial m} \\ &= \sum (y_i - mx_i - b)^2 \end{aligned}$$

$$\begin{aligned} \frac{\partial L}{\partial b} &= -2 \sum (y_i - mx_i - b) \\ &= -2 \sum (y_i - mx_i - b) \\ &= \text{slope}_b \text{ at } b = 0 \end{aligned}$$

$$\begin{aligned} \frac{\partial L}{\partial m} &= 2 \sum (y_i - mx_i - b) \\ &= -2 \sum (y_i - mx_i - b) x_i \\ &\quad \text{slope}_m \text{ at } \boxed{m = 1} \end{aligned}$$

 $\rightarrow \underline{w} = \underline{w} - n \frac{dL}{dw}$

Notes

Friday, June 4, 2021 4:47 PM

Why is it called ridge

5 Key Understandings

Saturday, June 5, 2021 4:20 PM

$$\sum_{i=1}^n (y_i - \hat{y}_i)^2 + \boxed{\lambda \|w\|^2}$$

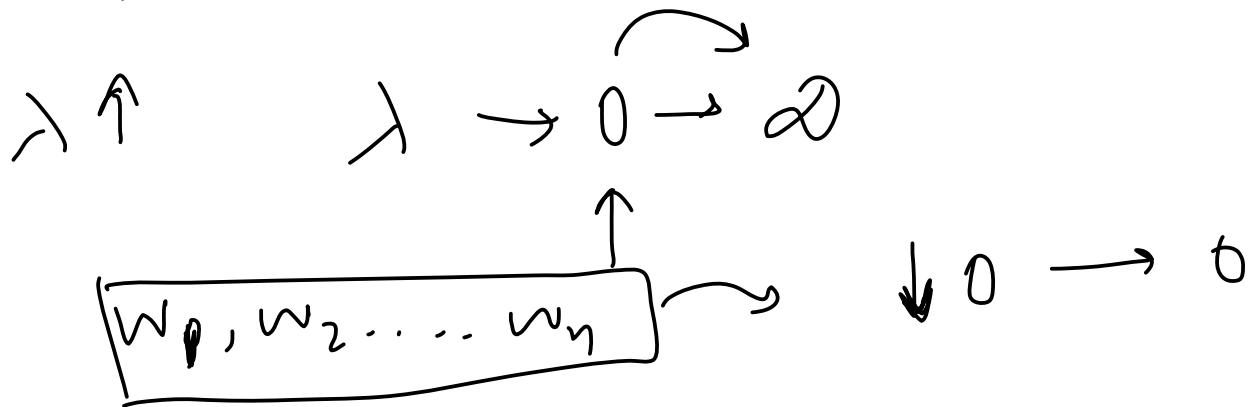

$\lambda (w_1^2 + w_2^2 + \dots + w_n^2)^2$

Shrinkage
coef → Overfitting ↘

The diagram illustrates the Ridge Regression cost function. It starts with the sum of squared residuals term $\sum_{i=1}^n (y_i - \hat{y}_i)^2$, which is highlighted with a bracket labeled "Shrinkage". This term is followed by a plus sign and a regularization term $\lambda \|w\|^2$, which is enclosed in a box and labeled "coef". A bracket under the regularization term indicates it is equivalent to $\lambda (w_1^2 + w_2^2 + \dots + w_n^2)^2$. An arrow points from the word "Overfitting" towards the regularization term, suggesting that the regularization helps prevent overfitting.

1. How the coefficients get affected?

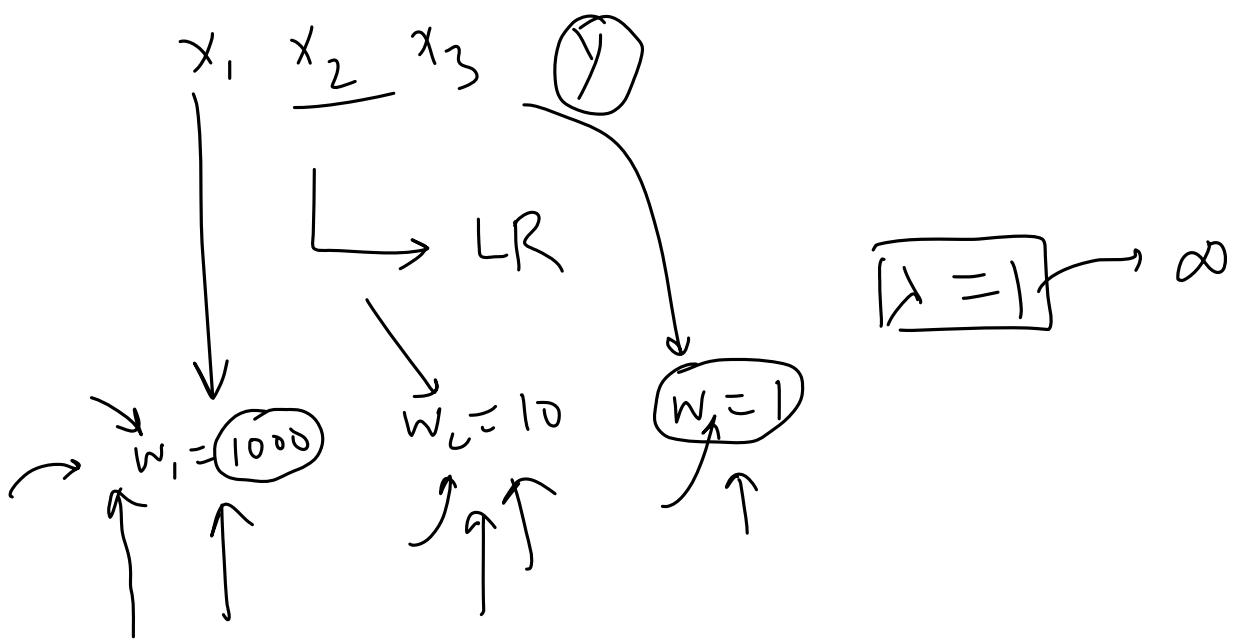

Saturday, June 5, 2021 4:20 PM

2. Higher Values are impacted more

Saturday, June 5, 2021 4:21 PM

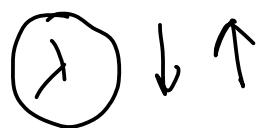

Never reaches 0

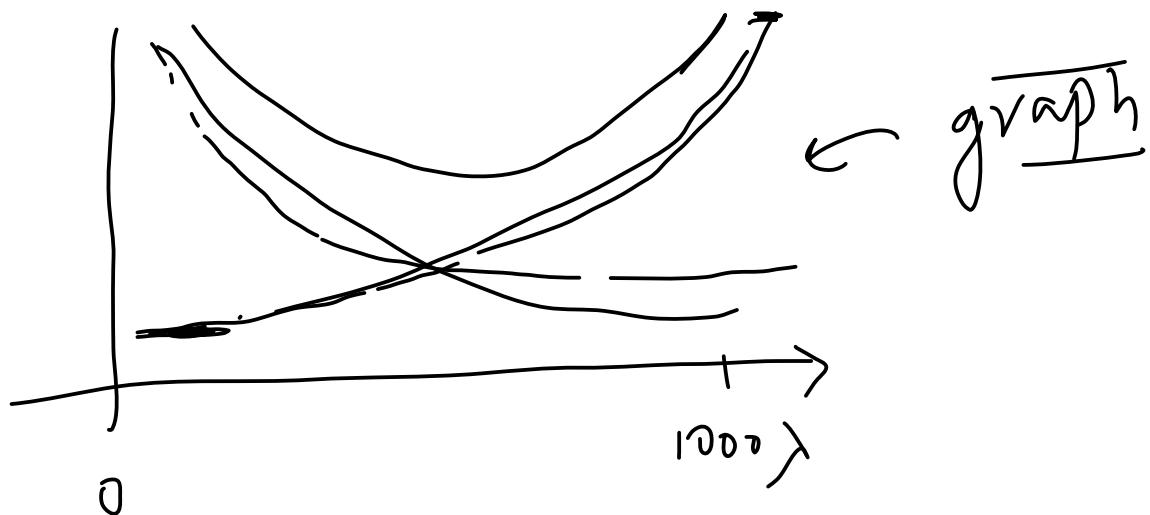

3. Bias Variance Tradeoff

Saturday, June 5, 2021 4:21 PM

Bias Variance

Bias ↓ overfit Variance ↑
Bias ↑ underfitting Variance ↓

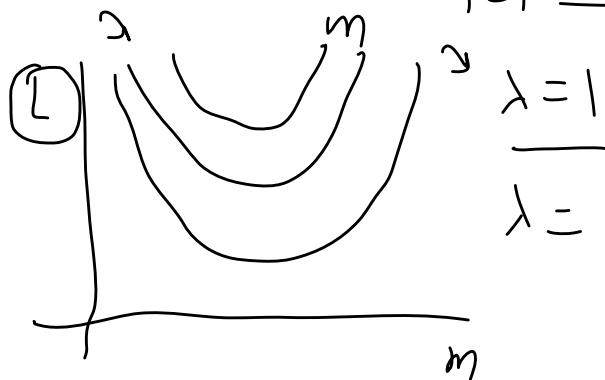

4. Impact on the Loss Function

Saturday, June 5, 2021 4:21 PM

$$\lambda \rightarrow L = \sum_{i=1}^n (y_i - \hat{y}_i)^2 + \underline{\lambda} \|w\|^2$$

$x, y \rightarrow [m, b] \sim b$ is constant

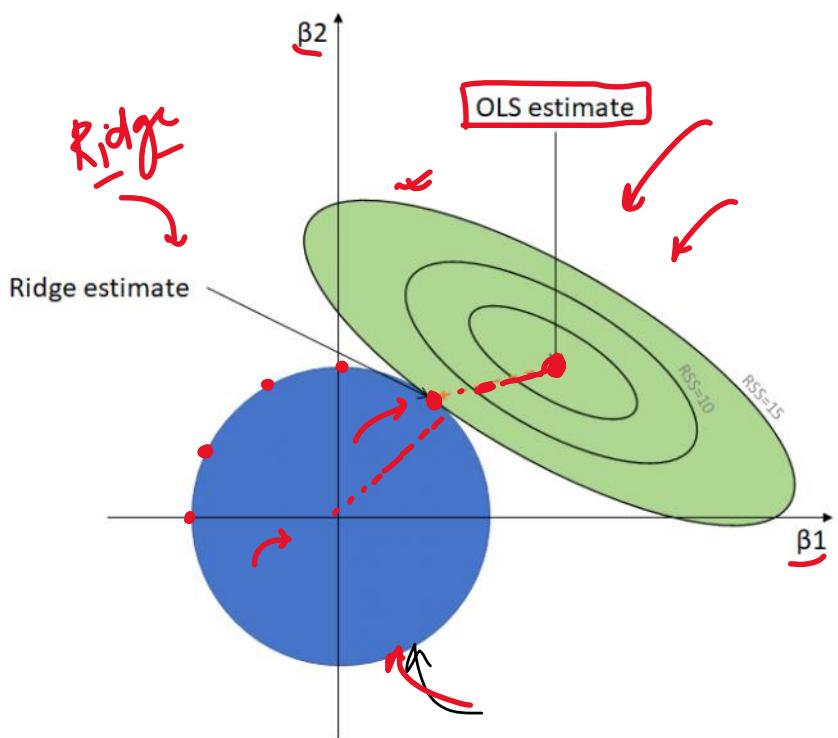

$$m \quad \underline{b=b} \quad L = \sum_{i=1}^n (\hat{y}_i - \underline{m} x_i)^2 + \underline{\lambda m^2}$$

$$b = -2.29$$

5. Why called Ridge

Saturday, June 5, 2021 4:22 PM

Hard constraint
Ridge constraint

$$2 \text{ coef } \beta_1 \beta_2 \beta_0$$

$$L = \text{MSE} + \lambda \|w\|^2$$

contour

$$(y_i - \hat{y}_i)^2$$

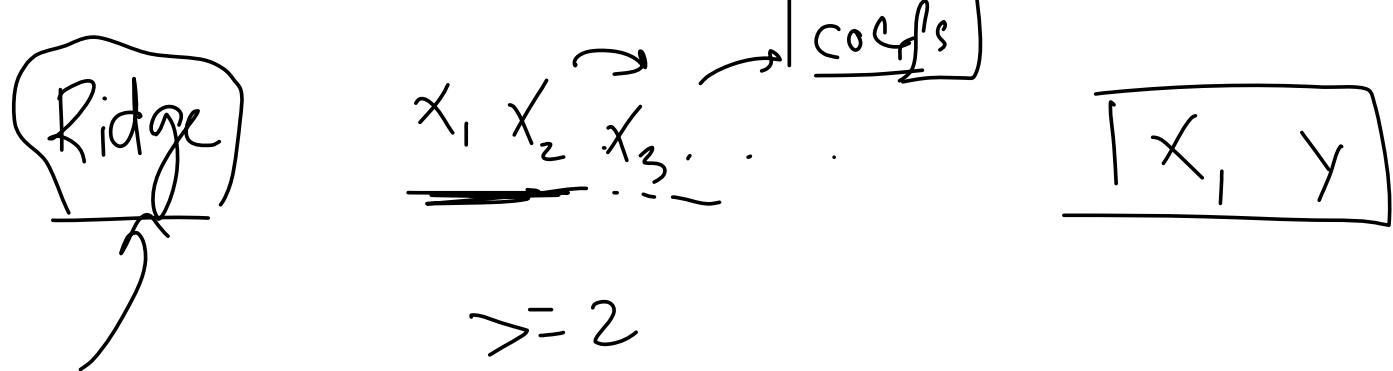

$$\sum_{i=1}^n \frac{(y_i - (\beta_0 + \beta_1 x_{i1} + \beta_2 x_{i2}))^2}{\text{MSE}}$$

$$\boxed{\lambda (\beta_1^2 + \beta_2^2)}$$

Practical Tip

Monday, June 7, 2021 1:20 PM

Use ridge when there are more than 2 input cols

≥ 2

Lasso Regression

Algorithm

Monday, September 20, 2021 8:23 AM

$$\rightarrow \{(x_i, y_i)\}_{i=1}^n \quad \eta=3 \quad x_i \ y_i$$

Input: training set $\{(x_i, y_i)\}_{i=1}^n$ a differentiable loss function $L(y, F(x))$, number of iterations M .

→ 1. Initialize $f_0(x) = \arg \min_{\gamma} \sum_{i=1}^N L(y_i, \gamma)$.

→ 2. For $m = 1$ to M :

→ (a) For $i = 1, 2, \dots, N$ compute

$\gamma_{jm} \rightarrow$

$$r_{im} = - \left[\frac{\partial L(y_i, f(x_i))}{\partial f(x_i)} \right]_{f=f_{m-1}}.$$

residual / pseudo-residual

(b) Fit a regression tree to the targets r_{im} giving terminal regions R_{jm} , $j = 1, 2, \dots, J_m$.

(c) For $j = 1, 2, \dots, J_m$ compute

$$\boxed{\gamma_{jm}} = \arg \min_{\gamma} \sum_{x_i \in R_{jm}} L(y_i, f_{m-1}(x_i) + \gamma).$$

(d) Update $f_m(x) = f_{m-1}(x) + \sum_{j=1}^{J_m} \gamma_{jm} I(x \in R_{jm})$.

3. Output $\hat{f}(x) = \boxed{f_M(x)}$.

$$\oplus \quad f_1(x) = \boxed{f_0(x) + dT}$$

$$f_2(x) = f_1(x) + dT_2$$

$$f_2(x) = f_1(x) + dT_2$$

$$f_0(x) + dT$$

$$f_1(x) + dT_1$$

$$f_4(x) = f_0(x) + \dots$$

→ recursion

$$f_1(x) \ f_2(x)$$

Need of Other Clustering Methods

Saturday, November 6, 2021 7:38 AM

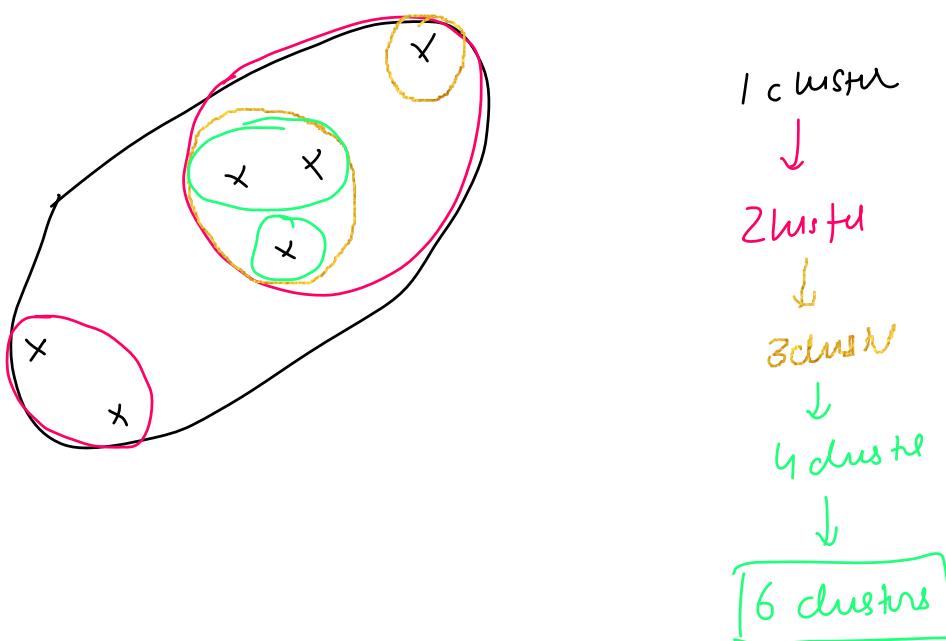

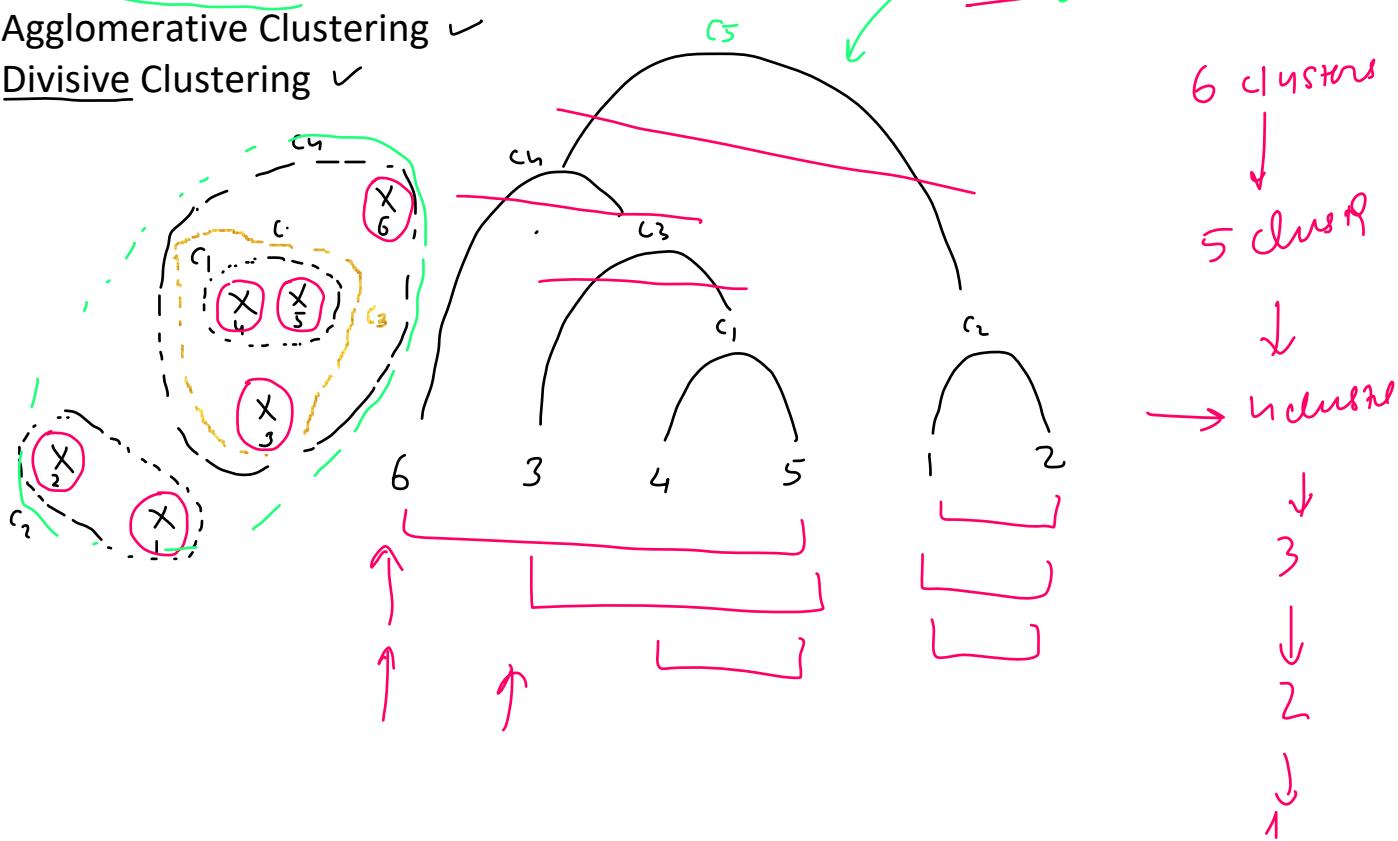

Introduction

Saturday, November 6, 2021 7:39 AM

Types of Hierarchical Clustering:

1. Agglomerative Clustering ✓
2. Divisive Clustering ✓

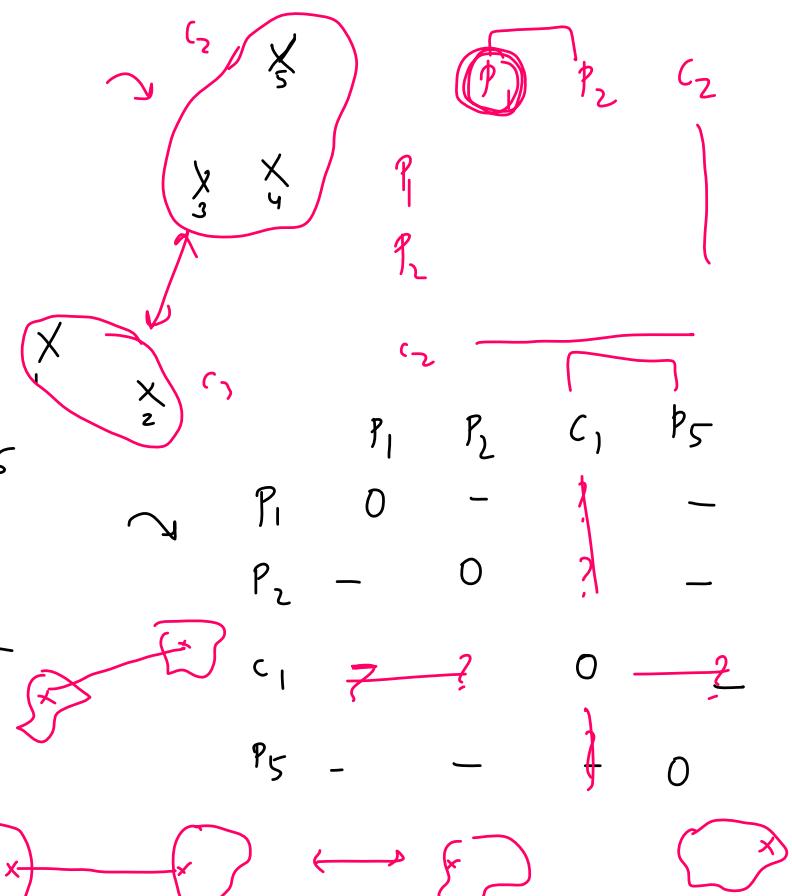

Algorithm

Saturday, November 6, 2021 7:39 AM

1. Initialize the Proximity Matrix
2. Make each point a cluster
3. Inside a loop
 - a. Merge the 2 closest clusters
 - b. Update the Proximity Matrix
4. Until only one cluster is left

n points $n \times n$

	P_1	P_L	$\boxed{P_3 \quad P_4}$	P_5
P_1	0	-	-	-
P_2	-	0	-	-
$\boxed{P_3 \quad P_4}$			$c_2 \quad c_3$	

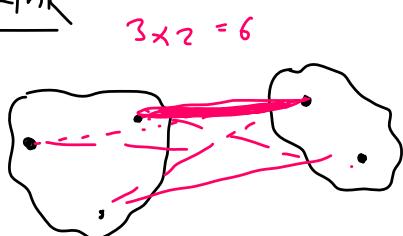

Types

Saturday, November 6, 2021 7:39 AM

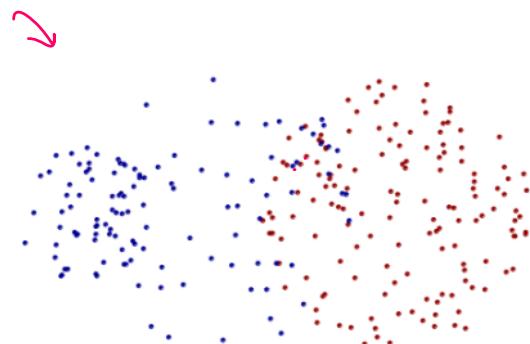

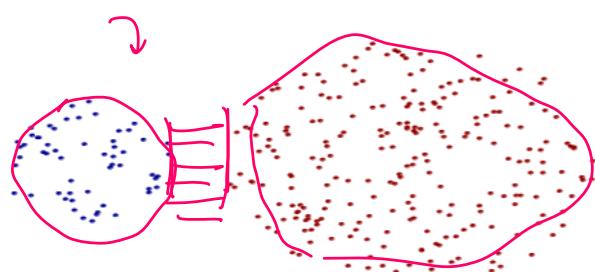

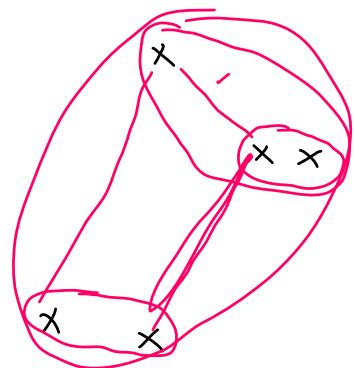

Types of Agglomerative Clustering

1. Min (Single-link)
2. Max (Complete Link)
3. Average
4. Ward

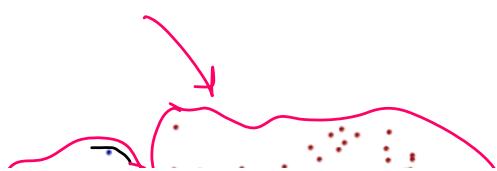

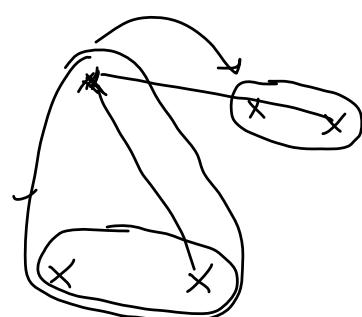

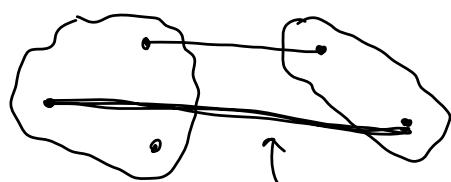

1. Single link

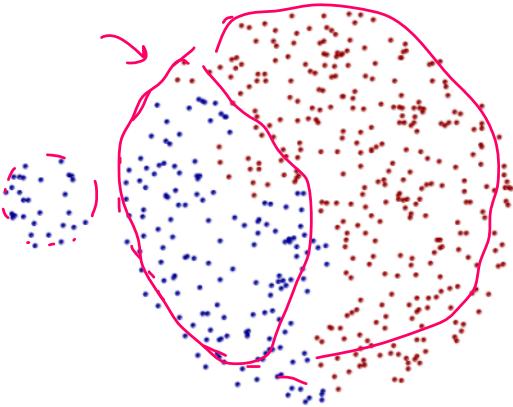

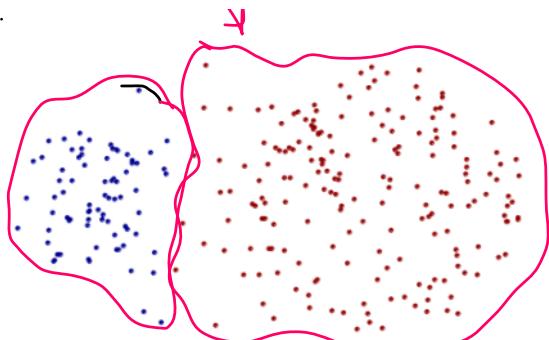

$$3 \times 2 = 6$$

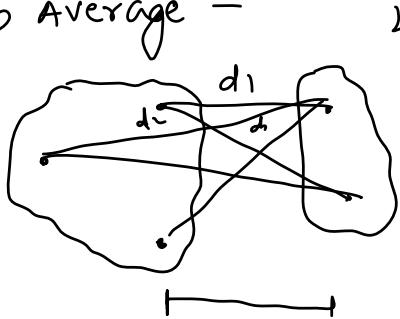

2. Complete link (Max)

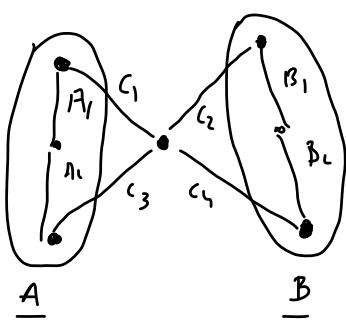

3. Group Average -

$$\frac{d_1 + d_2 + d_3 + \dots + d_6}{12 \times 3} =$$

4. ward \rightarrow SK Ward

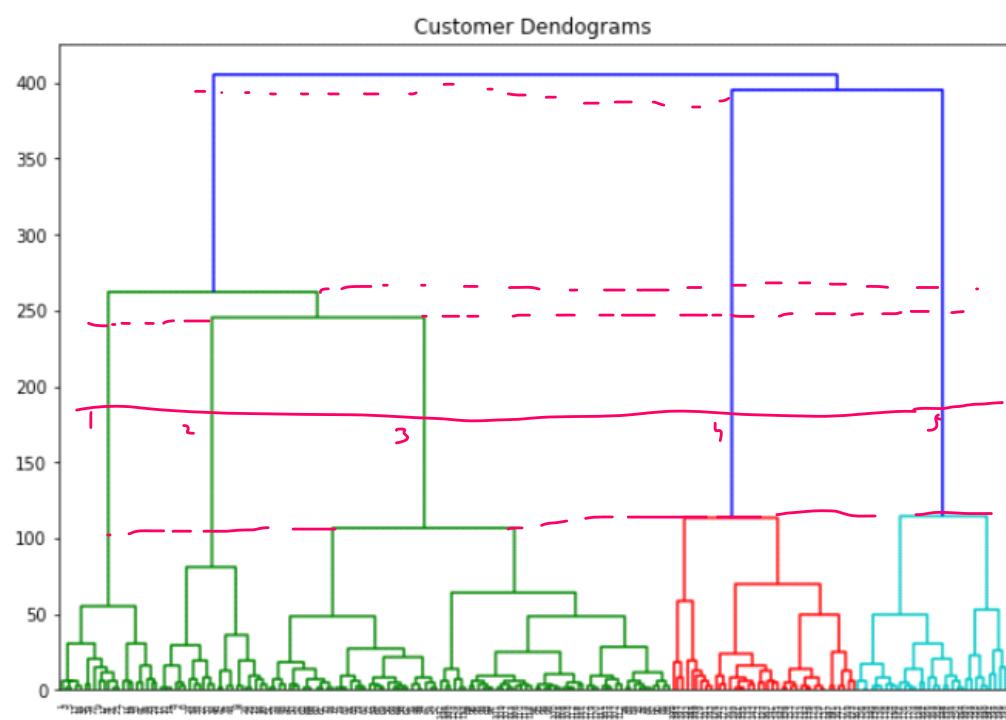

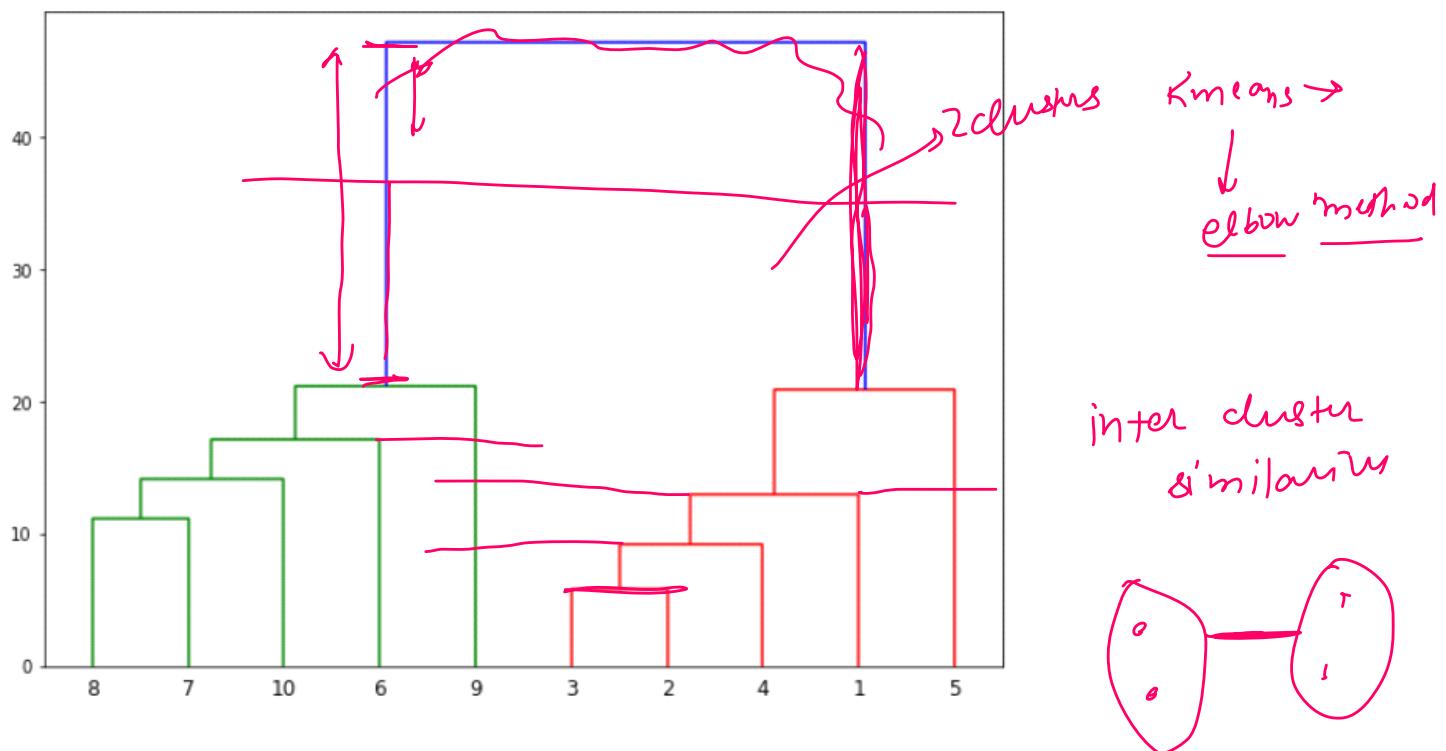

$$dist = \frac{c_1^2 + c_2^2 + c_3^2 + c_4^2 - A_1^2 - A_2^2 - B_1^2 - B_2^2}{A \rightarrow B}$$

XGBoost Features

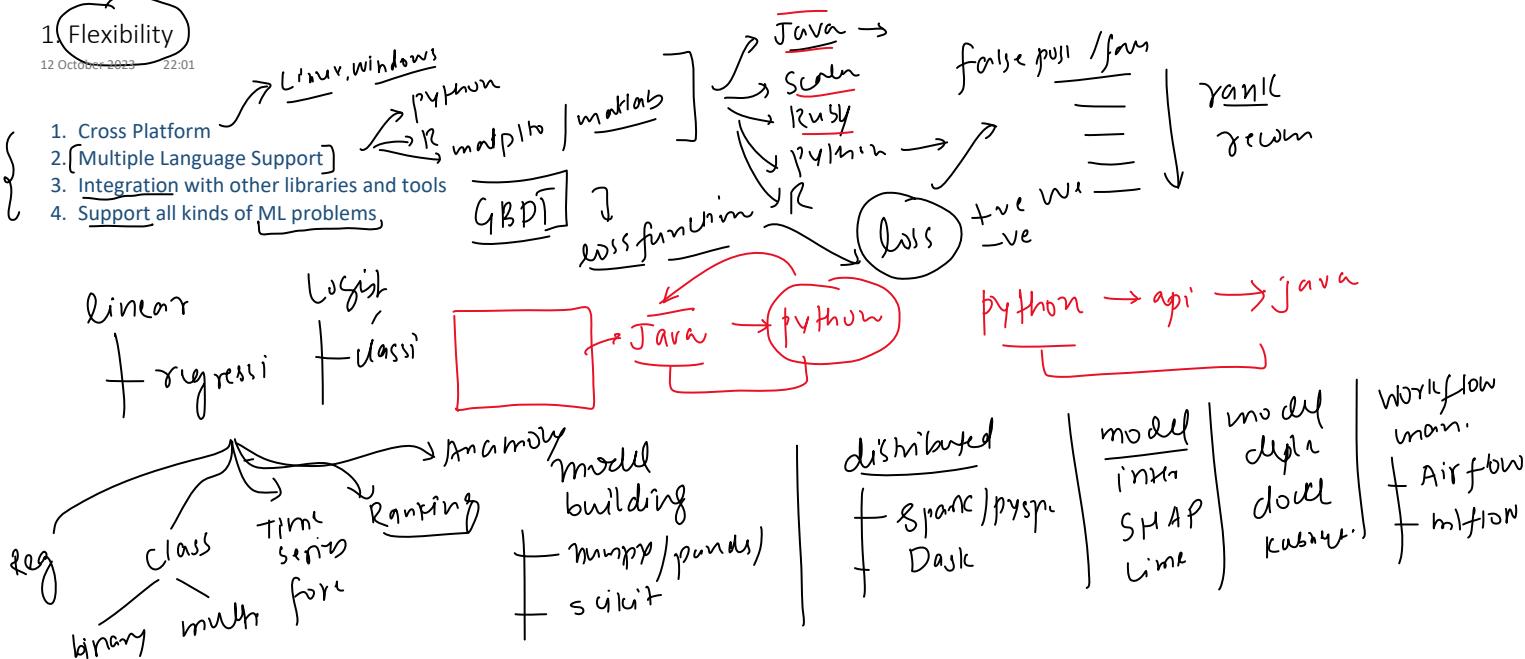

12 October 2023 21:55

Flexibility

12 October 2023 22:01

1. Cross Platform
2. Multiple Language Support
3. Integration with other libraries and tools
4. Support all kinds of ML problems

Python (Training and Saving the Model)

```
python
import xgboost as xgb

# Assuming dtrain is your data in DMatrix format
model = xgb.train(params, dtrain, num_rounds)
model.save_model('xgboost_model.model')
```

} Python

Java (Loading and Using the Model)

```
java
import ml.dmlc.xgboost4j.java.Booster;
import ml.dmlc.xgboost4j.java.DMatrix;
import ml.dmlc.xgboost4j.java.XGBoost;

// Load model
Booster booster = XGBoost.loadModel("xgboost_model.model");

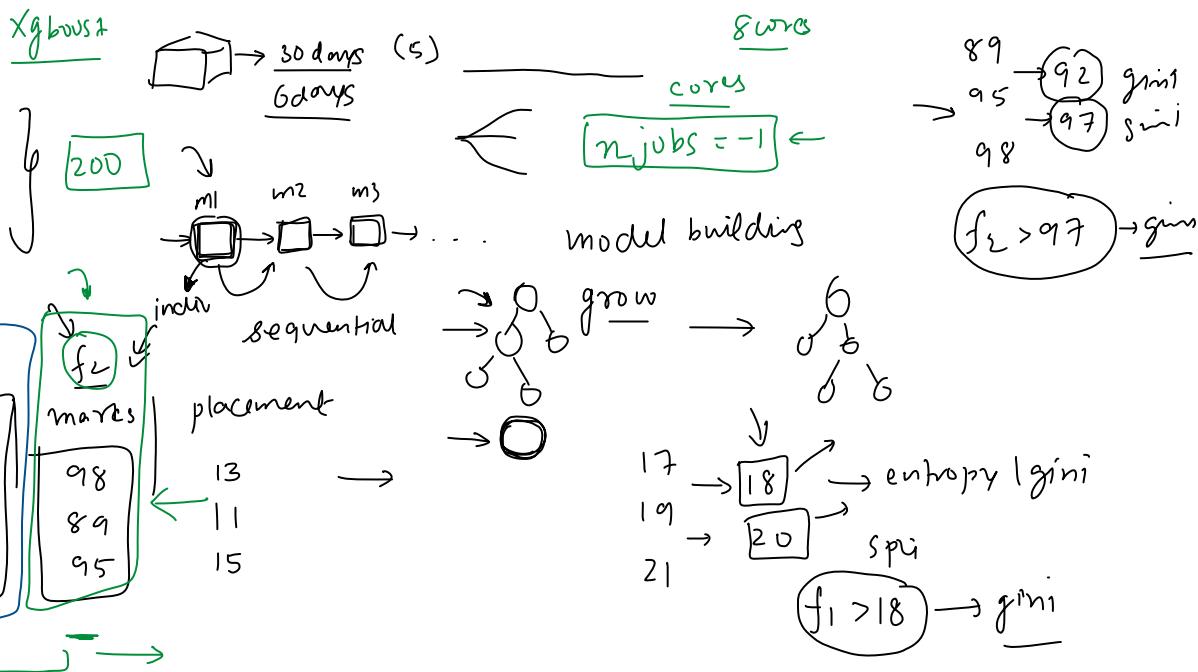

// Assuming data is your input data in DMatrix format
DMatrix data = new DMatrix("path_to_your_data");
float[][] predictions = booster.predict(data);
```

} Java

boosring

4.1 , 9.1

base estimator → mean

stage 1 [stage II]

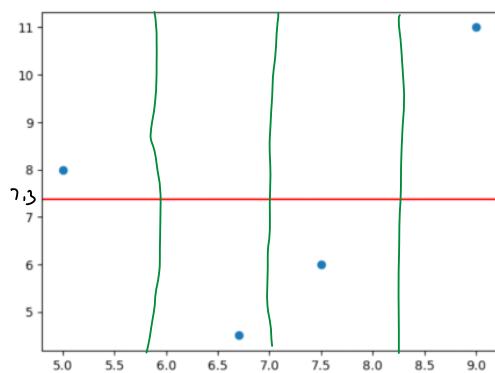

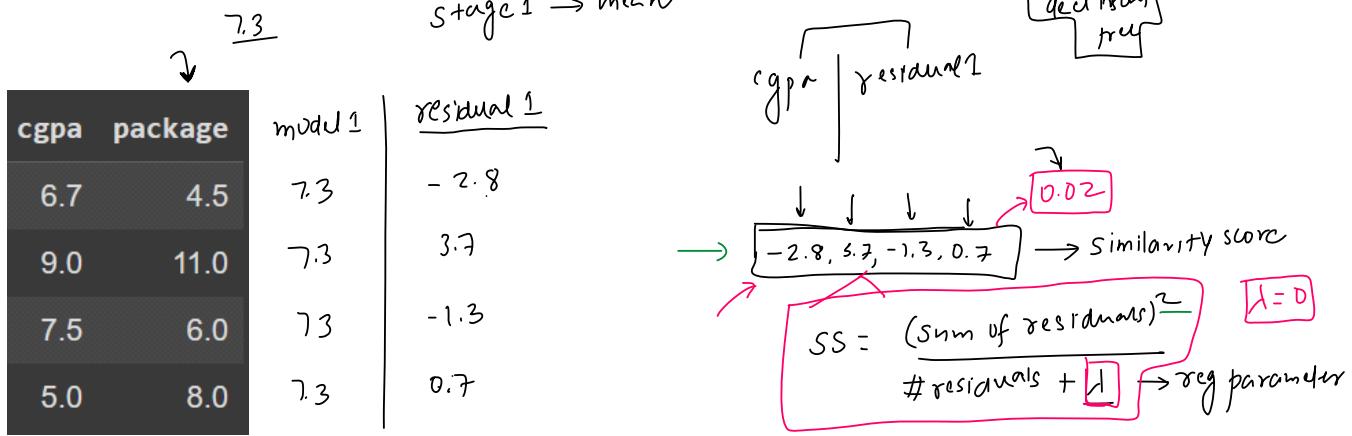

$$\rightarrow \boxed{7.5} + \boxed{0 \times 17} + \boxed{0 \times 17}$$

$$\text{GB} \xrightarrow{\text{Vanilla dt}} \text{different} \xrightarrow{\text{gini / entropy tree lossfuncy}} \boxed{\text{diff criteria}}$$

Step by Step Calculation

23 October 2023 15:07

Splitting criterion ① → 5.85

$\rightarrow \text{cgpa} < 5.85$

0.7 -2.8, -1.3, 3.7

$SS_L = \frac{(0.7)^2}{1+0}$
 $= \frac{0.49}{1} = 0.49$

$SS_R = \frac{(-2.8 - 1.3 + 3.7)^2}{3}$
 $= \frac{0.16}{3} = 0.05$

$$\text{gain} = (SS_L + SS_R) - SS_{\text{root}}$$
 $= 0.49 + 0.05 - 0.02$
 $= 0.52$

Splitting criterion ② → 7.1

$\rightarrow \text{cgpa} < 7.1$ → Similar

0.7, -2.8 -1.3, 3.7

$$SS_L = \frac{(0.7 - 2.8)^2}{2} = \frac{4.41}{2} = 2.20$$

$$SS_R = \frac{(-1.3 + 3.7)^2}{2} = \frac{14.44}{2} = 7.22$$

$$\text{gain} = SS_L + SS_R - SS_{\text{root}}$$
 $= 2.20 + 7.22 - 0.02$
 $= 9.40$

Splitting criterion ③ → 8.25

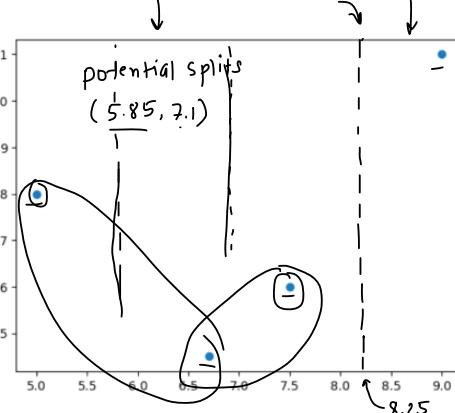

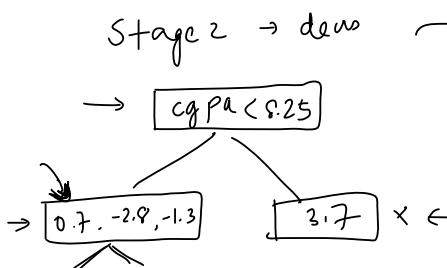

$\rightarrow \text{cgpa} < 8.25$

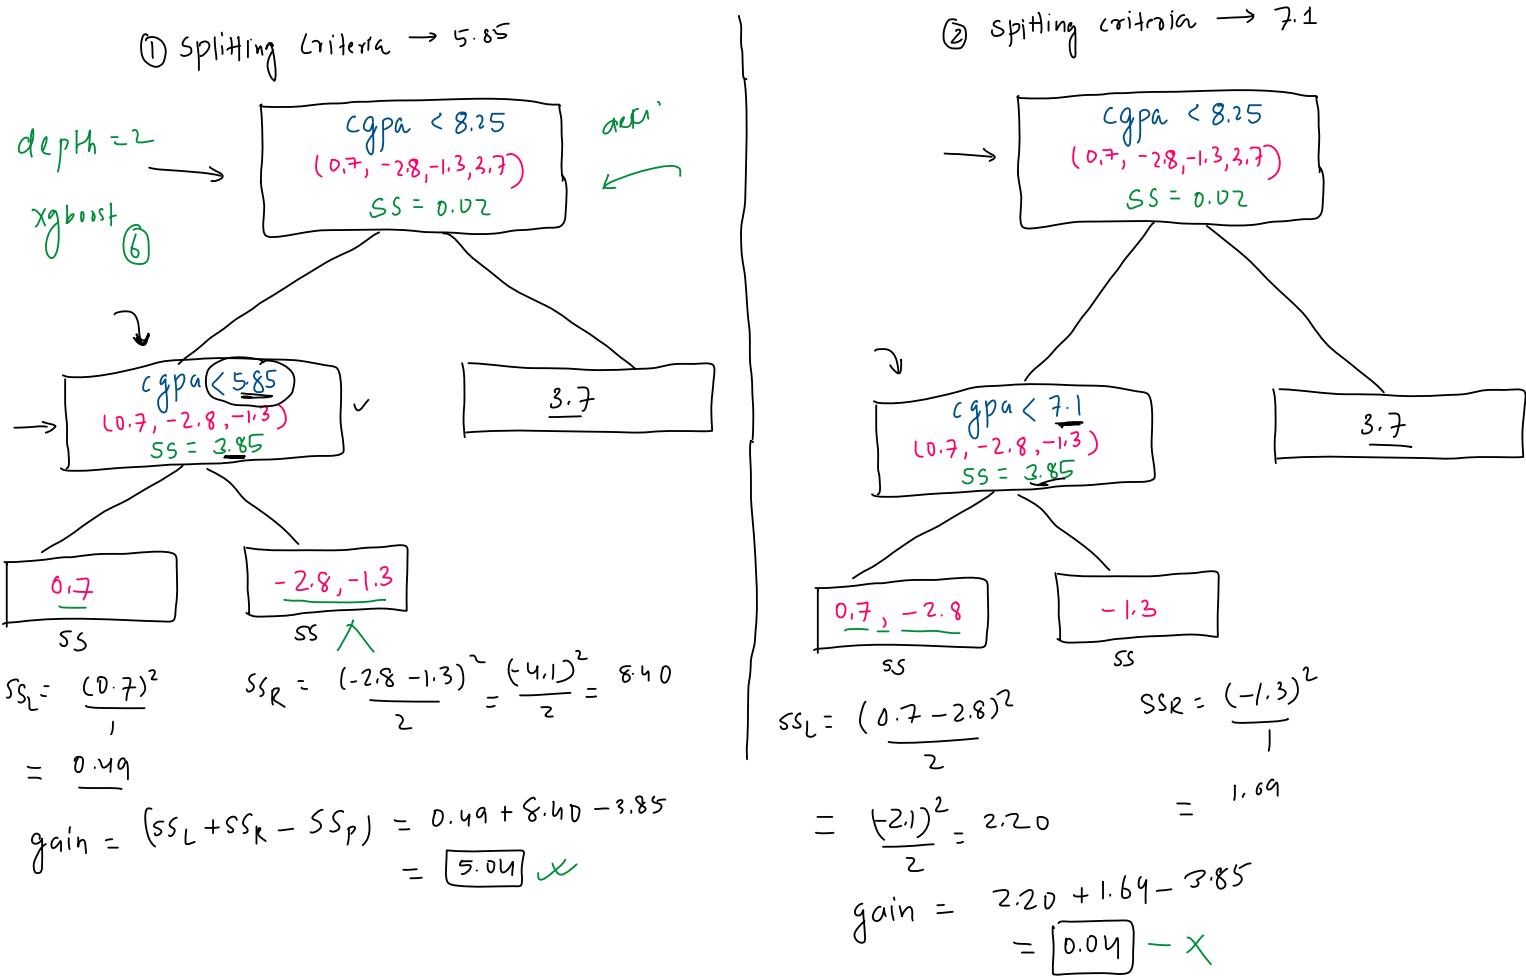

0.7, -2.8, -1.3 3.7

$$SS_L = \frac{(0.7 - 2.8 - 1.3)^2}{3} = \frac{11.56}{3} = 3.85$$

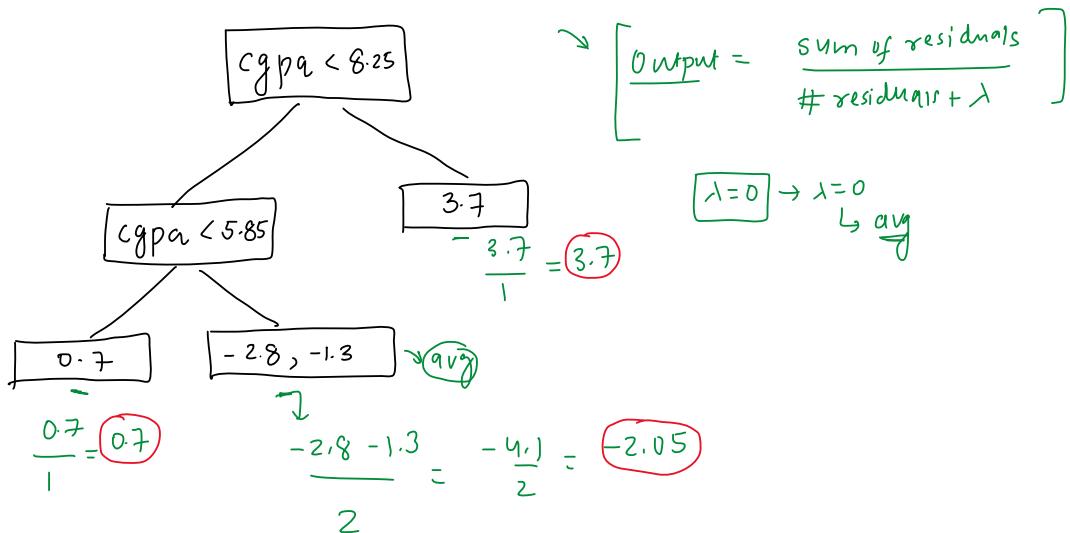

$$SS_R = \frac{(3.7)^2}{1} = 13.69$$

$$\text{gain} = 3.85 + 13.69 - 0.02$$
 $= 17.52$

$$\text{exp}$$

How

$e^x \rightarrow$ polynomial
 \rightarrow derivatives

$e^x \rightarrow e^x$

$$f(x) = e^x \quad a=0$$

$$f(a) = e^a = 1$$

$$\frac{f'(a)}{1!} (x-a) = \frac{e^a}{1} (x-a) = e^0 (x-0) = x$$

$$\frac{f''(a)}{2!} (x-a)^2 = \frac{e^a}{2!} (x-a)^2 = \frac{e^0 (x)^2}{2!} = \frac{x^2}{2}$$

$f(x)$ point $\rightarrow a$

$$f(x) \simeq \underbrace{f(a)}_{1!} + \underbrace{\frac{f'(a)}{1!} (x-a)}_{+} + \underbrace{\frac{f''(a)}{2!} (x-a)^2}_{+} + \underbrace{\frac{f'''(a)}{3!} (x-a)^3}_{+} + \dots$$

$$\frac{f'''(a)}{3!} (x-a)^3 = \frac{e^a}{3!} (x-a)^3 = \frac{1}{6} x^3 = \frac{x^3}{6}$$

$$e^x \simeq \boxed{1+x} + \frac{x^2}{2} + \frac{x^3}{6} + \dots$$

Applying Taylor Series

01 December 2023 00:51

$$f(x) \approx f(a) + f'(a)(x-a) + \frac{f''(a)}{2!}(x-a)^2 \dots \quad \left[\begin{array}{l} \frac{\partial f}{\partial x} = \\ f'(x) \quad \frac{\partial f}{\partial x} = 2x \\ f''(a) = 2a \end{array} \right]$$

$$\Rightarrow L^{(t)} = \sum_{i=1}^n L(y_i, \hat{y}_i^{(t-1)} + f_t(x_i)) + J(f_t(x_i)) \rightarrow \text{2nd degree}$$

$$f(a) = \sum_{i=1}^n L(y_i, \hat{y}_i^{(t-1)}) \rightarrow \text{gradient } g_i$$

$$\frac{f'(a)}{1} (x-a) = \sum_{i=1}^n \frac{\partial L(y_i, \hat{y}_i^{(t-1)})}{\partial \hat{y}_i^{(t-1)}} f_t(x_i) \rightarrow \text{hessian } h_i$$

$$\frac{f''(a)}{2} (x-a)^2 = \frac{1}{2} \sum_{i=1}^n \frac{\partial^2 L(y_i, \hat{y}_i^{(t-1)})}{\partial \hat{y}_i^{(t-1)2}} f_t^2(x_i)$$

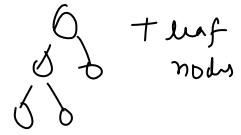

$$L^{(t)} = \sum_{i=1}^n L(y_i, \hat{y}_i^{(t-1)}) + g_i f_t(x_i) + \frac{1}{2} h_i f_t^2(x_i) + J(f_t(x_i))$$

Simplification

Why DBSCAN?

16 December 2023 15:10

K-means?

1) Specify clusters

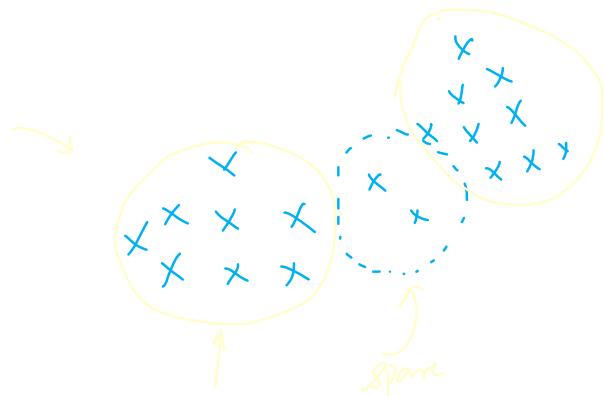

↓
size → dim → plot

2) Sensitive to outliers

3)

What is Density Based Clustering

16 December 2023 15:12

Kmean
↓
→ centroid
clustering

DBSCAN → Density Based Spatial
clustering of Applications
with Noise

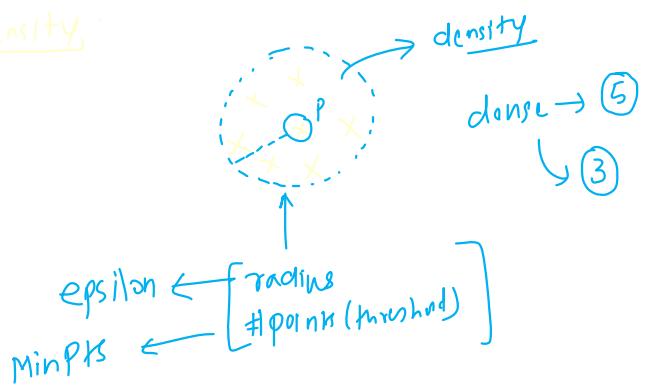

OPTICS

MinPts & Epsilon

16 December 2023 15:13

Density:

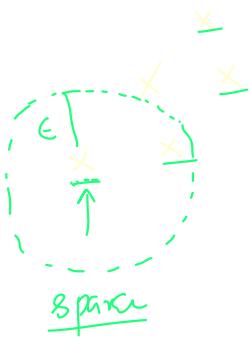

density
hyperparameter

epsilon
↳ radius of
the neighbor

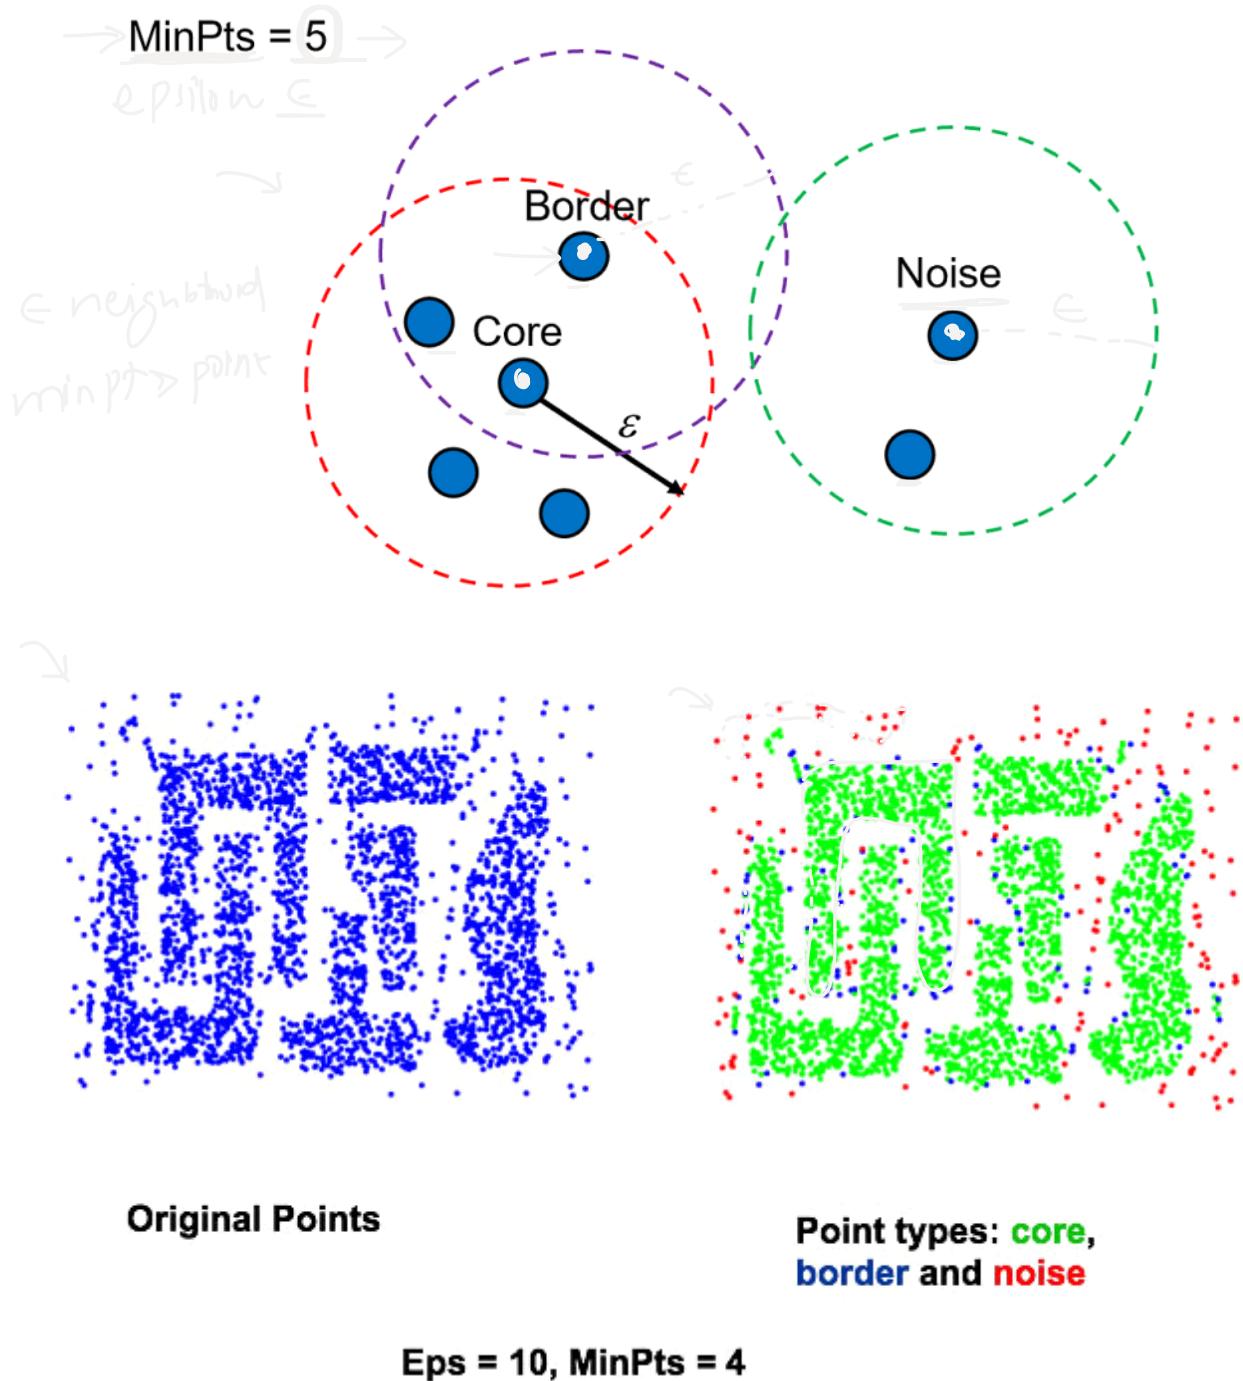

min^{pts}
↳ threshold

epsilon → Unit
min pts → 3

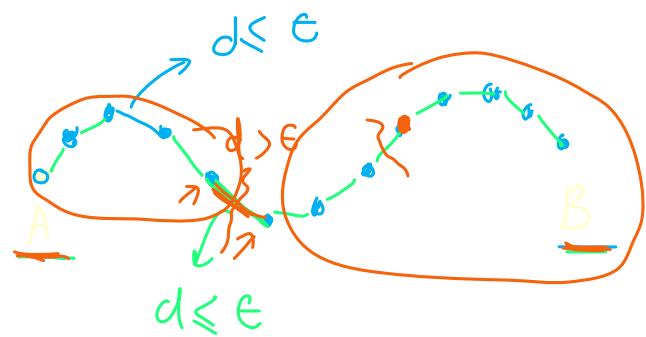

Core Points, Border Points & Noise Points

16 December 2023 15:13

Density Connected Points

16 December 2023 15:13

DBSCAN Algorithm

16 December 2023 15:14

Step 1 → minPts / epsilon ← 3

Step 1 - Identify all points as either core point, border point or noise point

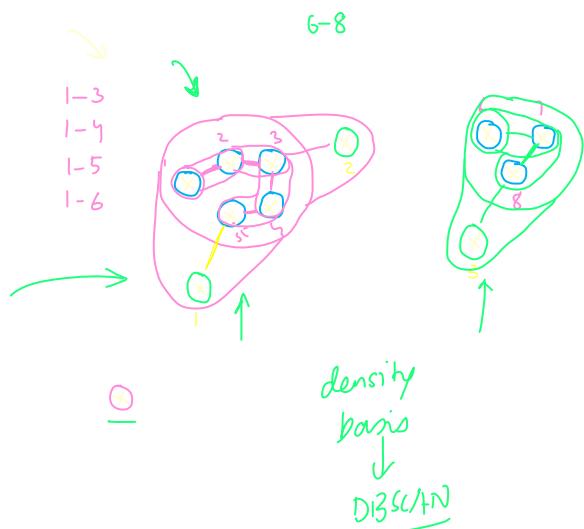

Step 2 - For all of the unclustered core points

Step 2a - Create a new cluster

Step 2b - add all the points that are unclustered and density connected to the current point into this cluster

→ Step 3 - For each unclustered border point assign it to the cluster of nearest core point

Step 4 - Leave all the noise points as it is.

Code

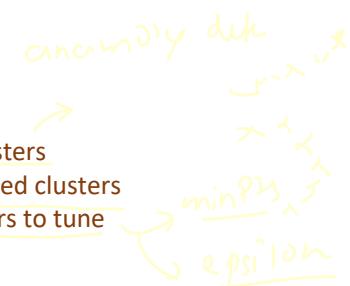

16 December 2023 15:14

Limitations

16 December 2023 15:14

Advantages

- 1. Robust to outliers
- 2. No need to specify clusters
- 3. Can find arbitrary shaped clusters
- 4. Only 2 hyperparameters to tune

- 1. Sensitivity to hyperparameters →
- 2. Difficulty with varying density clusters →
- 3. Does not predict

↳ prediction prediction

What is Imbalanced Data?

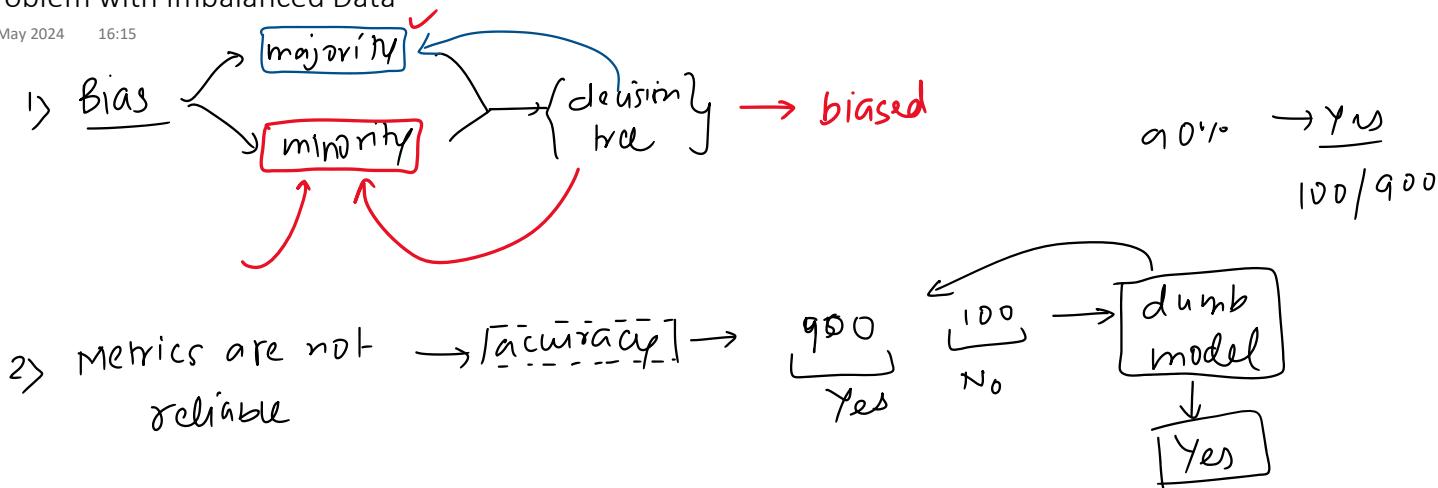

02 May 2024

16:12

Problem with Imbalanced Data

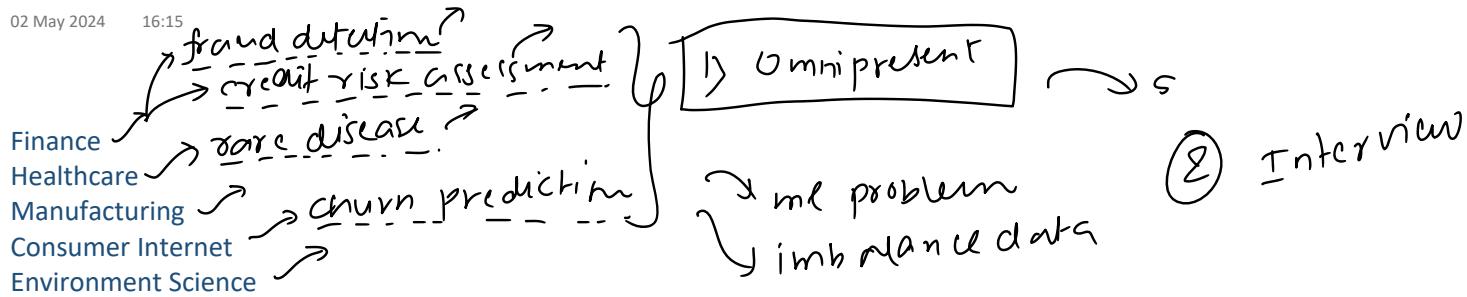

02 May 2024 16:15

Why studying Imbalanced Data is important?

02 May 2024

16:15

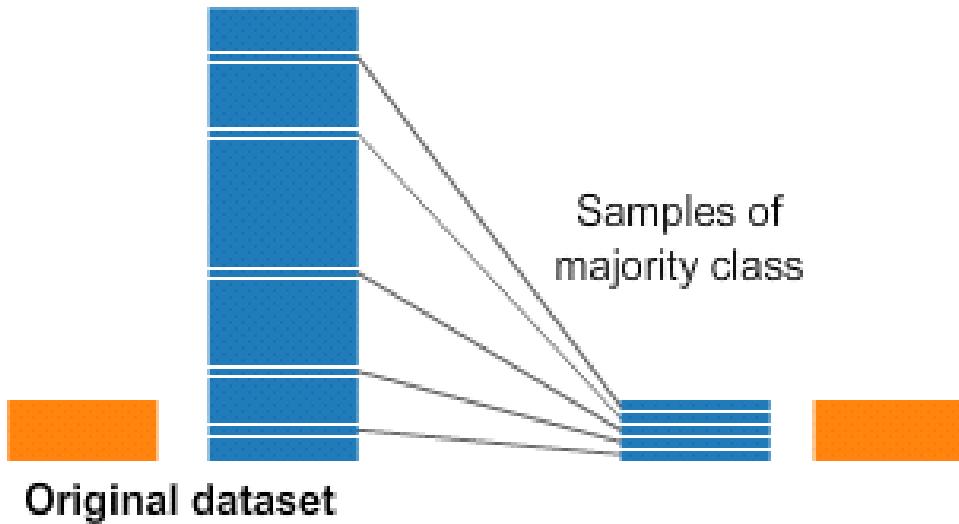

1. Undersampling

02 May 2024 16:17

7

Undersampling

Advantages

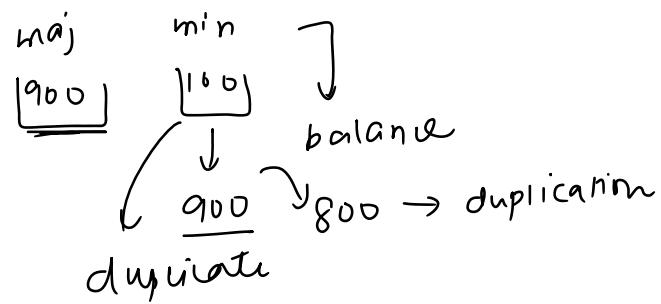

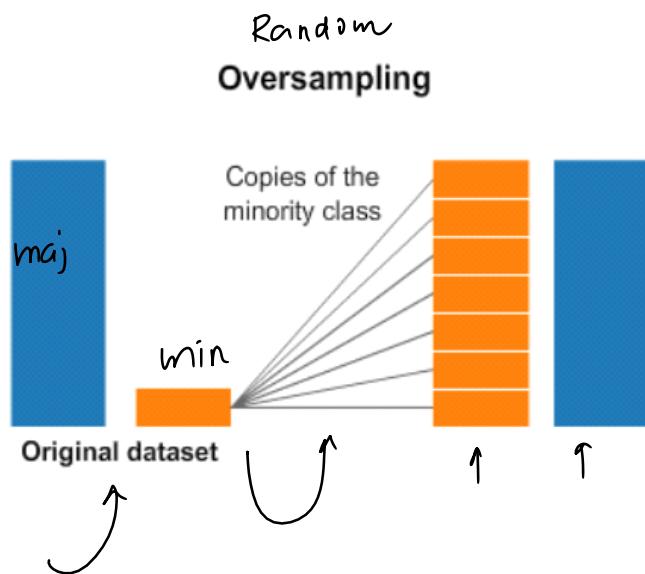

1. Reduction in bias
2. Faster training

Disadvantages

1. Information loss leading to underfitting
2. Sampling Bias

2. Oversampling

03 May 2024 01:13

Advantage

1. Reduced Bias ✓

ml als v
imp → overfitting
↓
dealing w/ ROS → overfitting

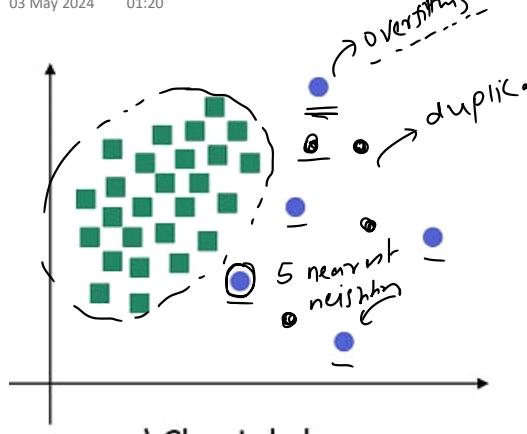

A handwritten note explaining the advantage of reduced bias in machine learning models. It points out that while random oversampling (ROS) can help deal with imbalanced data, it may lead to overfitting if the model becomes too complex. The note uses arrows to connect the concepts of 'ml als v' (machine learning as a variable), 'imp → overfitting' (imbalanced data → overfitting), and 'dealing w/ ROS → overfitting' (dealing with ROS → overfitting).

Disadvantage

1. Increased size
2. Duplication of data may cause overfitting

3. SMOTE popular → Oversampling → min → upsampling

03 May 2024 01:20

a) Class Imbalance

b) SMOTE

5 KNN

- Train a KNN on minority class observations - find each observation's 5 closest neighbours

To create the new synthetic data:

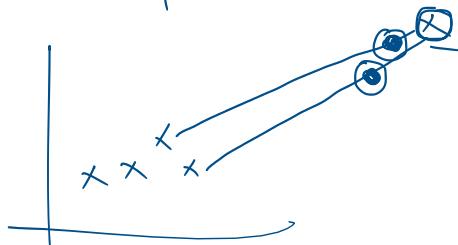

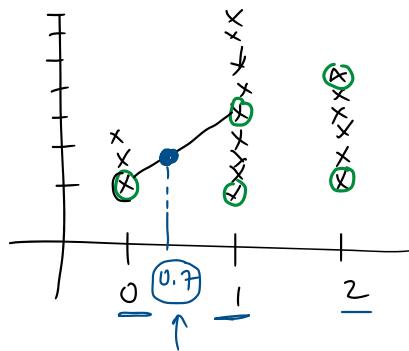

- Select examples from the minority class at random
- Select a neighbour of each example at random (for the interpolation)
- Extract a random number between 0 and 1
- Calculate the new examples as original sample - factor * (original sample - neighbour)
- The final dataset consists of the original dataset + the newly created examples

$\circ \rightarrow K \rightarrow K=1$

Disadvantages

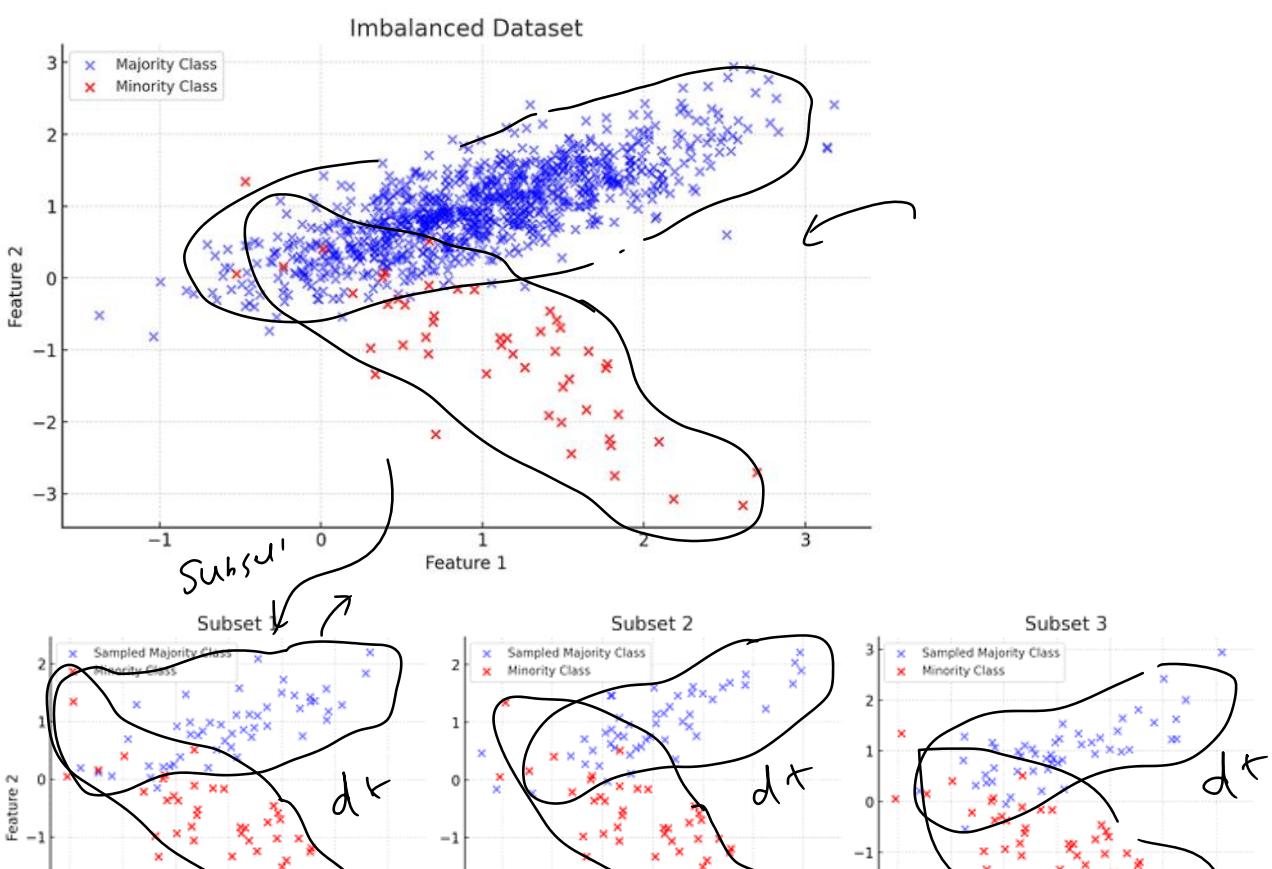

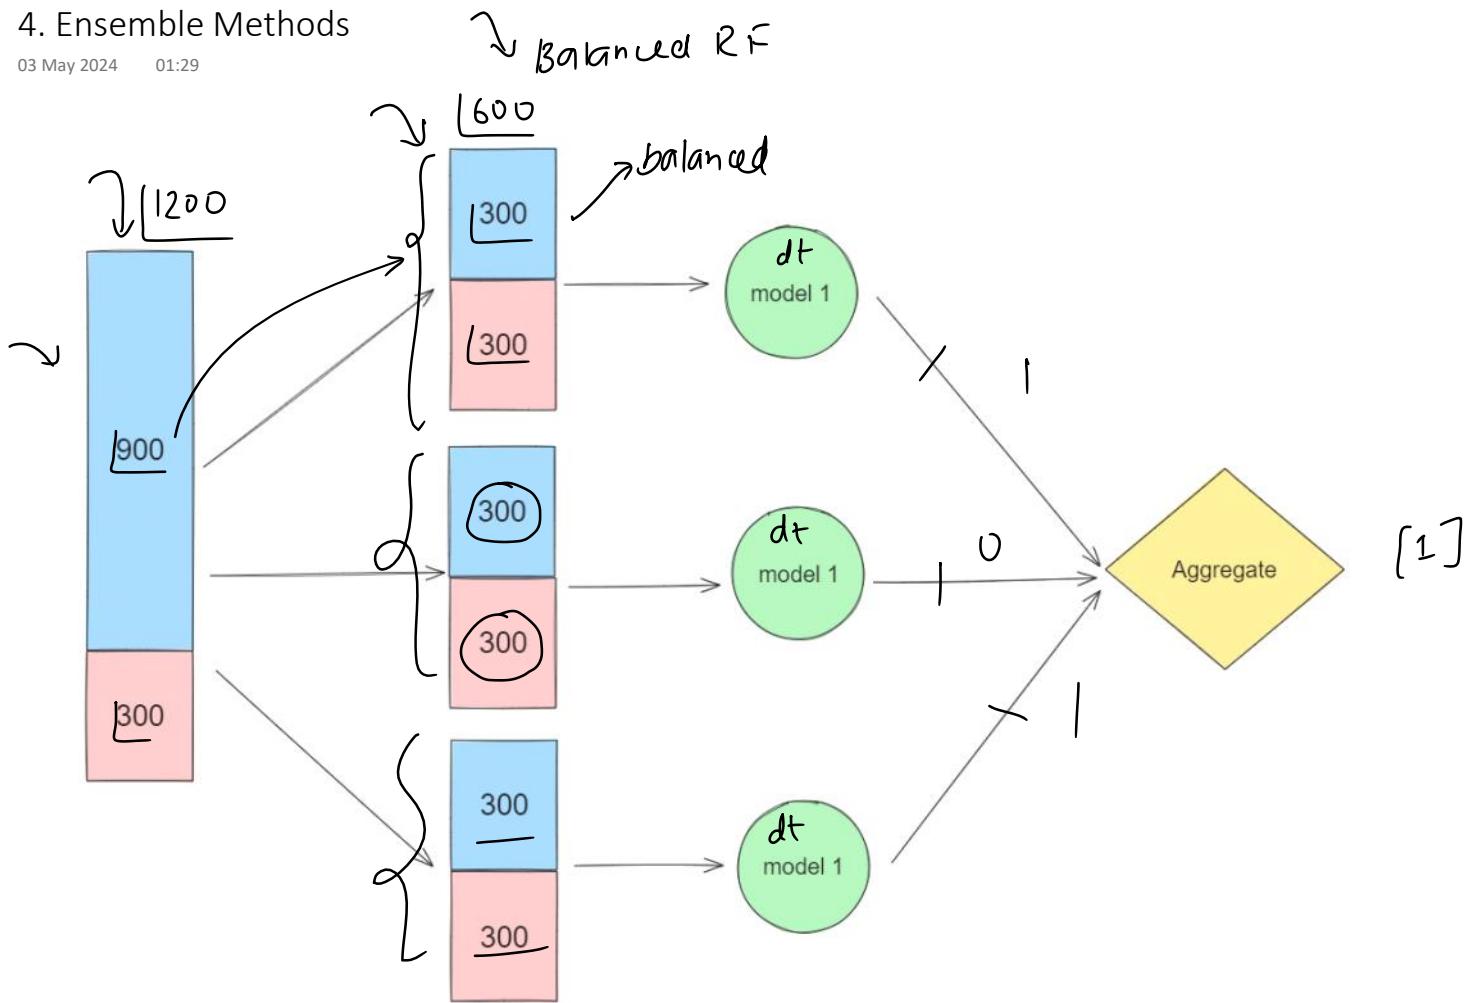

$K=5$

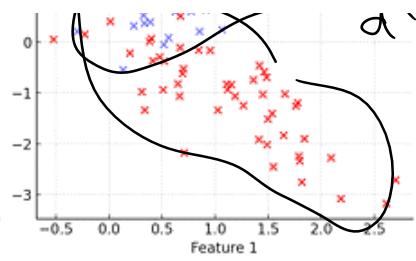

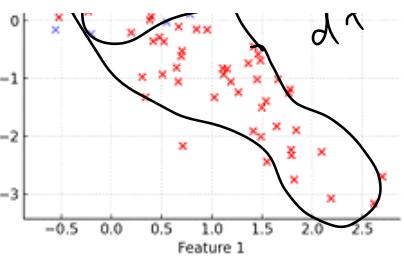

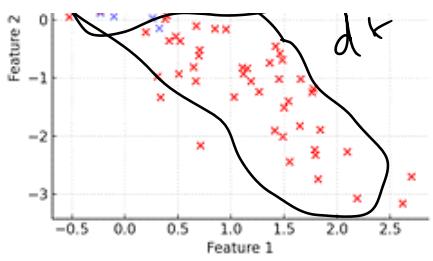

- Does Not Handle Categorical Data Well ✓
- Computational Complexity
- Dependency on the Choice of Neighbors
- Sensitive to Outliers
- Balance Achieved May Not Reflect True Nature

4. Ensemble Methods

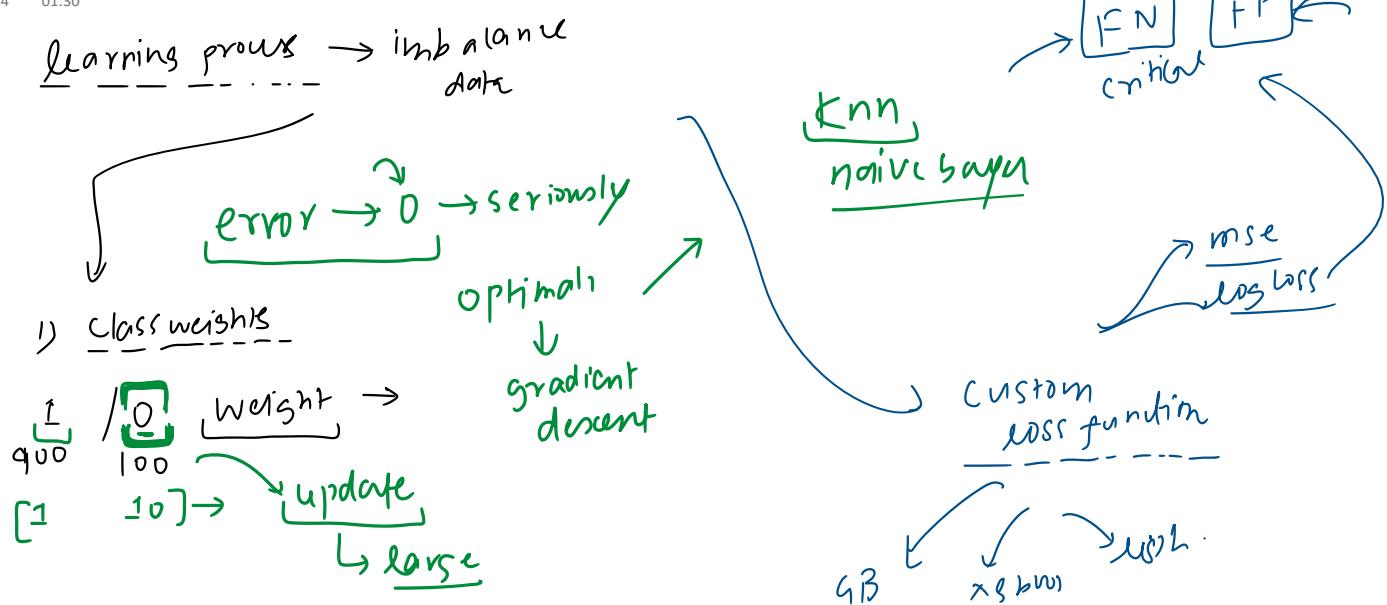

03 May 2024 01:29

5. Cost Sensitive Learning

03 May 2024 01:30
